Air Drill | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Air Drill

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:	
Contact Phone:	
Project Manager Signature:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters.	☐ is carried out on or near pressurised gas mains or piping.
☐ is carried out on a telecommunication tower.	☐ is carried out on or near chemical, fuel or refrigerant lines.
☐ involves demolition of an element of a structure that is load-be	☐ is carried out on or near energised electrical installations or services.
☐ involves demolition of an element related to the physical integrit of a stru	☐ is carried out in an area that may have a contaminated or flammable atmosphere.
☐ involves, or is likely to involve, disturbing as stos.	☐ involves tilt-up or precast concrete.
☐ involves structural alteration or repair that re mporar upp to prevent collapse.	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
☐ is carried out in or near a confined space.	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant.
☐ is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY							
☐ Forklift	☐ Crane/s	☐ Hoist/s	☐ Excavator	☐ Backhoe/Loader	☐ Boom Lift	☐ EWP	☐ Genie Lift
☐ Trencher	☐ Drilling Rig	☐ Trucks	☐ Formwork	☐ Bobcat	☐ Flammable Gas	☐ Fuel	☐ Dozer
☐ High Voltage	☐ Mulcher	☐ Tilt-up Panels	☐ Roller	☐ Scissor Lift	☐ Tractor	☐ Other -

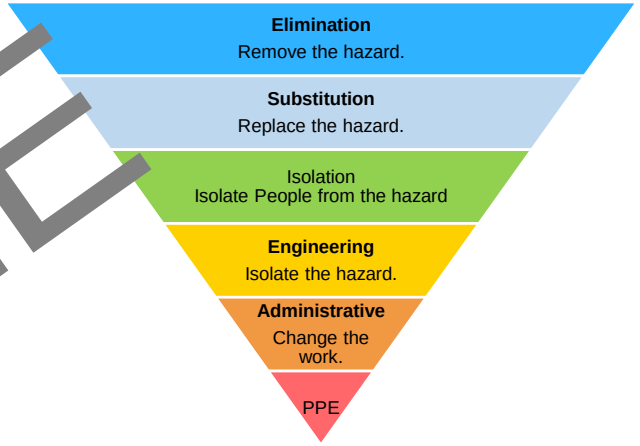
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	nitor and k records

HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost ef ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Electrical hazards, Trip and fall hazards	2M	- Conduct a thorough risk assessment of the work area to identify potential hazards and implement appropriate control measures before commencing any task. - Ensure that all workers involved in the use of air drills have received adequate training, are familiar with the equipment, and understand the associated risks and control measures. - Inspect and test all electrical equipment, cords, and connections prior to use to ensure they are in good working condition and free from defects. - Make use of appropriate personal protective equipment (PPE), such as safety boots, gloves, goggles, or earplugs, as required, to minimise the risk of injury from electrical hazards, flying objects, or other potential hazards. - Clear the work area of any unnecessary equipment, debris, or other trip hazards before beginning the task. - Use high visibility markings (e.g., tape, cones) to designate hazardous areas or zones where air drilling is taking place, alerting workers and pedestrians to the potential risks. - Keep electrical cords and hoses used for the air drill neatly organised and secured to minimise trip and fall hazards. This can be achieved using cable protectors or hooks to keep them off the ground. - Implement a lockout/tagout system for the air drill when it is not in use or during maintenance to prevent accidental start-up or electrical shock incidents. - Check for any overhead or underground utilities (e.g., power lines, gas pipes) before drilling to prevent accidental contact and related incidents. - Set up proper lighting around the work area to avoid shadows and ensure that all workers can see clearly while using the air drill. - Develop an emergency response plan detailing actions to be taken in case of accidents or incidents involving the air drill and communicate this plan to all workers involved. - Assign a designated person to monitor the work area and ensure compliance with established safety regulations and procedures throughout the project. - Regularly review and update the Safe Work Method Statement (SWMS) for air drilling processes to ensure it remains relevant and effective in managing identified risks and hazards.	1L	
2. Equipment setup	Manual handling injuries, Noise exposure	3H	- Conduct a pre-start safety briefing for all workers involved in equipment setup, discussing the identified hazards and control measures. - Provide workers with proper training on safe manual handling techniques to avoid musculoskeletal injuries during equipment transportation and setting up. - Use mechanical aids such as trolleys or lifting equipment, where possible, to reduce the need for manual handling of heavy equipment components.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Implement a safe work method statement that incorporates correct lifting techniques, body postures, and proper equipment handling procedures. - Apply safe ergonomic principles in the workplace layout and design to minimise manual handling risks and facilitate efficient movement during equipment setup. - Ensure the air drill and all related components are well maintained and inspected regularly to ensure optimal performance, reducing the risk of noise-related issues. - Encourage workers to take sufficient breaks and rotate tasks, where possible, to allow recovery time for muscles and reduce the risk of strain injuries associated with repetitive manual handling activities. - Institute a clear communication protocol among team members, including verbal signals and hand gestures, for coordinating lifting and rigging operations. - Provide and mandate the use of appropriate personal protective equipment (PPE), such as gloves, safety footwear, and hearing protection devices, to mitigate risks associated with manual handling and noise exposure. - Communicate emergency protocols and first aid procedures to workers, ensuring the availability and accessibility of first aid kits and trained personnel on site. - Set up exclusion zones around the work area, using signage and barricades, to restrict access to unauthorised individuals and minimise the risk of potential injuries. - Establish ongoing monitoring processes to continually assess and adjust manual handling practices, updating risk assessments, and addressing any emerging issues as needed. - Continuously monitor noise levels at the worksite, implementing engineering controls like sound barriers or acoustic enclosures if necessary to protect workers from excessive noise exposure. - Promote a culture of safety awareness and encourage employees to report any hazards, injuries or concerns related to equipment setup and use, fostering an open dialogue for ongoing risk identification and management.		
3. Drilling operation	Flying debris, Hand and finger pinch points	4A	- Personal Protective Equipment (PPE): Ensure all workers wear appropriate PPE, including safety glasses or face shields, gloves, and hearing protection while operating the air drill to protect against flying debris and potential pinch points. - Tool Inspection: Regularly inspect the air drill for any signs of damage or wear that may result in flying debris or pinch points. Repair or replace damaged tools as necessary. - Secure Work Area: Ensure the workspace is free from loose objects, clutter, or unnecessary equipment that could contribute to flying debris, trip hazards, or other dangers during drilling operation. - Proper Drill Bit Selection: Choose the correct size and type of drill bit for the specific material being drilled, which can reduce the risk of flying debris and improve overall job efficiency.	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Drill Guards: Where possible, use appropriate drill guards to help contain any debris and prevent it from becoming airborne during drilling operations. - Drill Press use: When applicable, utilise a drill press to provide increased stability and control during drilling operations, reducing the chance of hand or finger injuries. - Operator Training: Ensure all workers using the air drill are properly trained on its safe operation, including appropriate techniques for handling and positioning the tool to avoid pinch points and flying debris risks. - Communication: Develop clear communication protocols between workers to coordinate drilling activities and alert others to potential hazards and changes in work conditions. - Two-Hand Operation: Encourage the use of both hands when operating an air drill, promoting better control and reducing the likelihood of pinching fingers or hands. - Workplace Ergonomics: Arrange workstations and support materials in a way that promotes comfortable and efficient body mechanics, helping to minimise injury risk to hands and fingers during drilling. - Emergency Preparedness: Develop and maintain emergency response procedures in case of injuries or accidents related to drilling operations, including access to first aid and medical resources. Periodic Reviews: Regularly review and update the Safe Work Method Statement (SWMS) for air drilling to ensure ongoing safety and hazard awareness, as well as incorporate new best practices or technologies that may further mitigate risks.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti sa tions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im ementa of cont measures.	☐	☐	
Permit requirements specified, such as Hot Wor Electrical Work, W at Heights etc.	☐	☐	
SWMS identifies plant and equipment to be us d.	☐	☐	
Details of inspection checks required for any equipment listed a noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
