

Airborne Ultrasonics SAFE WORK METHOD STATEMENT (SWMS)								
TAS	K OR ACTIVITY: Airborne Ultras	onics						
Business Name: [Company Name]		ABN: [ABN]	SWMS#					
Business Address: [Company Address]								
Contact Person:	Phone: [Phone]	E ail:						
THIS SAFE WORK METHOD	STATEMENT IS APPROVED BY	THE P. J OF THE PROJECT						
Under the Work Health and Safety Regulation (WHS Regulation), a person conducte proposed work starts.	cting a business or undertaking (I BU) is	s required to ture out a safe work method s	statement (SWMS) is prepared before					
Full Name:								
Signature:		Title:	Date:					
Details of the person(s) responsible for ensuring implementation, monitoring	compliance of the SWMS, well as review	vs and modifications of the SWMS.						
Full Name:		Title:	Phone:					
ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS WMS. ST HAVE THE FOLLOWING COMMUNICATED	N. TE AND DATED SIGNATURE OF A CC. MUNICATED TO IN THE DEVELO	ALL RELEVANT PERSONNEL WHO HAVE B OPMENT AND APPROVAL OF THIS SWMS	EEN CONSULTED AND					
Safety meetings or toolbox talks will be sched ed in accordance with egislative requirements to first identify any site hazards, conduct unica those hazards and then to further take steps to either chare or contained whazard.	NAME	SIGNATURE	DATE					
If an incident or a near miss occurs, all work must structure unately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.								
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.								
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Trip and slip hazards, Electrical hazards	2М	 Ensure the work area is clean and free of clutter, debris, or any other obstacles that could potentially cause a trip or slip hazard. Install proper signage and barriers around the ork area to indicate potential hazards and restrict access to authorised protonnel only. Conduct regular inspections of the work area including floors and walkways, to identify and address any potential slip, trip, or unusual hazards. Implement an effective cable management systems uch as using cable covers or organizers to prevent cables the creating tripping, carry and ensure they remain undamaged. Utilise approache person protective equipment (PPE) such as non-slip footwear, safety gloves and eye production to the qateries associated with identified hazards. Mathetic all better quipment use on the work step is well-maintained, tested, and the diby a concel electrician to verify its safe operation. Provin the ting to the workers involved in the work step on how to safely handle and oppate engipment as identify potential hazards and take immediate for when new systems. Ensurate workers to report any hazards or unsafe conditions immediately to their supervision of the Workplace Health and Safety Consultant for prompt action and solution. Regularly update risk assessments and safety procedures based on new information, best practices, or changes in workplace conditions to ensure continued safety in the work environment while handling airborne ultrasonics. 	1L	
2. Equipment Setup	Manual handling risks, Noise exposure	2М	 Proper Equipment Handling: Ensure that workers are trained in correct manual handling techniques when lifting, carrying, or setting up the equipment to minimise the risk of injuries. Use of PPE: Provide appropriate personal protective equipment (PPE), such as gloves and safety footwear, to protect workers from potential hazards when handling the equipment. Team Lifting: Encourage team lifting for heavier equipment or components to reduce the strain on individual workers and prevent injuries. Trolley Usage: Utilise trolleys or other mechanical aids to transport heavy equipment, where possible, to minimise manual handling risks. Pre-Setup Inspection: Carry out a thorough inspection of the equipment before setup to identify any potential hazards or issues that could pose a risk during operation. 	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Noise Assessment: Conduct a noise assessment to determine if the ultrasonic equipment will generate a high level of noise exposure, and take action according to the results.		
			- Noise Control Measures: Implement engineer a controls, such as sound- dampening barriers or enclosures, to minipul noise exposure, especially if it is found to be above safe levels.		
			- Hearing Protection: Provide hearing protection the ces, like earplugs or earmuffs, to workers who are exposed to high noise levels using equipment operation, and ensure they are adequately to get in their use.		
			- Regular Breaks: Set an le regular breaks for worke, exposed to high noise levels to reduce the amount of the spectral a noisy environment, helping to minimise noise-induced learning damage.		
			- Clear Communication: Thablish clear communication protocols while working with ultras equip, at consure important instructions or warnings can be easily under by by all on members, especially in noisy conditions.		
			- Train, y a., Educa, y: Deliver comprehensive training sessions on airborne ultrasor, s, for sing or otential hazards like manual handling risks and noise roosur, and , wide information on how to mitigate these risks.		
	1		- Mc, origin and Review: Continuously review and monitor the implemented control neasure of assess their effectiveness in minimising hazards associated with uppent setup and make adjustments as needed.		
	C		Regular inspection and maintenance: Ensure that all equipment is regularly inspected and maintained according to the manufacturer's guidelines to help prevent malfunctions.		
			- Qualified personnel: Only allow trained and qualified personnel to carry out calibration tasks to minimise the risk of equipment malfunction or accidents due to human error.		
3. Calibration	Equipment malfunction, Electrical hazards	2M	 Isolation of electrical hazards: Ensure that any electrical hazards are properly isolated, marked, and secured to avoid accidental contact during the calibration process. 	1L	
	nazarus		- Personal protective equipment: Provide appropriate personal protective equipment (PPE) for workers during calibration, such as insulated gloves, safety goggles, and face shields, to protect against potential electrical hazards.		
			- Clear workspace: Maintain a clean and organised workspace during calibration to minimise the risk of trips and falls and to ensure that proper safety precautions are taken.		
			 Proper documentation: Keep accurate records of all calibrations performed, including date, time, equipment information, and any issues encountered or adjustments made.

SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Safe work practices: Implement safe work practices, such as lockout/tagout procedures, to protect personnel from unexpected energization or startup of equipment during calibration.		
			- Use of calibrated instruments: Ensure that only calibrated instruments are used in the calibration process to reduce the likelity of equipment malfunction.		
			- Emergency response plan: Establish a clear mergency response plan with assigned roles and responsibilities for address the alpment malfunctions and electrical hazards during calibration.		
			- Instrumentation grounding: On firm that all calibration impoundents are properly grounded according to many sturer's instruction of prevent electrical hazards.		
			- Awareness tracking: Concept regular safety tracking and awareness sessions on the proper use and handline of airbox sultracking equipment and the related hazard		
			 Incident apporting operation in the provided and the provided analysis of the provided analysis of the provided analysis of the provided and the p		
			Continueus improvement: Use findings from incident reports, audits, and is pections to develop and implement ongoing improvements to the calibration process and associated safety measures.

EMERGENCY RESPONSE - CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAF WC A STHUD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to review the sure it remains revised if necessary) if relevant control measure are a conconsultation with workers (including contractors are subcontract of the SWMS and their health and safety representatives who re workplace.

ke sure it remains effective and must be reviewed (and are subcontractions) who may be affected by the operation sentatives who received that work group at the

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

- 1. Spot Checks.
- 2. Consultation with workers, contractors and sub-contractors.
- 3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.			
Names and signatures of all relevant personnel consulted during the development of the SWMS.		P	
Name, signature, position and date signed of the person approving the SWMS.			
Specific personnel and qualifications, experience is noted in the SWMS.			
Provides a step-by-step process of tasks required to carry out the activity or task.			
Adequate risk assessment of any identified hazards has been completed.			
Foreseeable hazards are identified and documented for each step.			
Any hazards listed in any site risk assessments have been added to the SWN			
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.			
Check control measures added to the SWMS are the most effecting sections.			
Responsible person is assigned and listed on the SWMS for the imement of cont, measures.			
Permit requirements specified, such as Hot Wey, Electrical Work, Verat Heights etc.			
SWMS identifies plant and equipment to be up t.			
Details of inspection checks required for any equipment listed approved on the SWMS.			
Describes any mandatory qualifications, experience vaining skills required to perform the work.			
Applicable personal protective equipment is selected on the SWMS.			
Lists any required permits or licenses.			
Reflects and documents any legislative references and/or Australian Standards.			
Identifies any hazardous substances used with specific control measures in line with any SDS.
