Automatic Transmission Flusher | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Automatic Transmission Flusher

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).

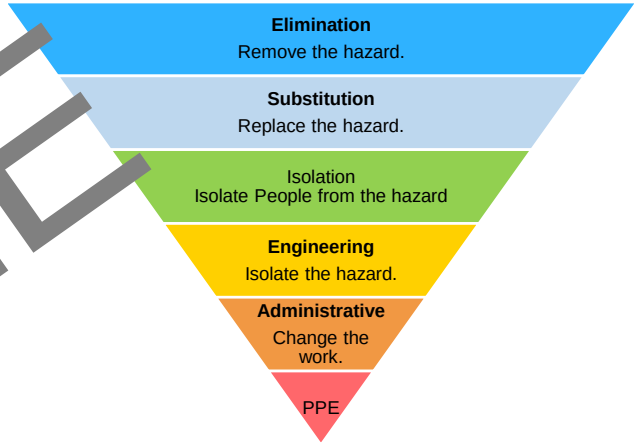
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost e ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Incorrect equipment, trip and fall hazards	2M	- Conduct a pre-start inspection of the workspace to identify and remove any potential trip or fall hazards prior to beginning work. - Ensure all employees working on the project have received appropriate training in the operation and maintenance of the Automatic Transmission Flusher and any associated equipment. - Select the correct equipment for the job, considering its suitability for the specific make and model of the vehicle, as well as the type of transmission fluid being used. - Keep walkways and pathways clear of cords, hoses, and other equipment to reduce trip hazards. - Establish a designated work area around the Automatic Transmission Flusher, using safety barriers or signs to alert others to the presence of the working area. - Verify that any required Personal Protective Equipment (PPE) is available, in good condition, and being worn by all workers involved in the task. - Practice proper manual handling techniques when moving or lifting equipment to prevent strain or injury. - Keep the work area clean and free from debris or spills to maintain a safe environment and minimise the risk of slips or falls. - Check that all necessary safety checks have been completed on the Automatic Transmission Flusher and other equipment before use, including but not limited to power supply connections and calibration. - Communicate with team members throughout the process, providing updates on any changes or potential hazards as they arise. - Implement an emergency response plan in case of injuries or accidents occurring during the work process and provide training to team members on how to respond effectively. - Regularly maintain and service the Automatic Transmission Flusher and associated equipment; ensuring any identified defects are promptly rectified to prevent accidents or injuries from occurring during operation. - Upon completion of the work, carefully store all tools and equipment away in their designated areas to maintain a clutter-free workspace and prevent future trip or fall hazards.	1L	
2. Inspection	Inadequate lighting, exposure to chemicals	3H	- Ensure proper lighting: Before starting the inspection, make sure that the work area is well-lit and fully illuminated to allow for a thorough examination of the equipment. - Provide suitable personal protective equipment (PPE): Workers should wear appropriate PPE, such as safety glasses, gloves, and coveralls, to protect themselves from exposure to chemicals and any other potential hazards during the inspection process.	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Conduct regular equipment maintenance checks: Regularly inspect and maintain the automatic transmission flusher to ensure it is in good working condition and free from any defects or leaks that may pose a risk. - Use appropriate tools and equipment: Only use approved tools and equipment, such as inspection mirrors and torches, specifically designed for inspecting an automatic transmission flusher. This minimizes the chances of accidental damage or mishandling. - Implement spill management procedures: Have a spill kit readily available to contain and clean up chemical spills efficiently and safely if they occur during the inspection process. - Clearly label and store chemicals: Make sure all chemicals used in the automatic transmission flusher are properly labeled, stored, and handled according to the relevant material safety data sheets (MSDS) and local regulations. - Implement hazard communication: Inform all workers involved in the inspection process of the hazards associated with inadequate lighting and chemical exposure, as well as their respective preventative measures. - Conduct training programs: Provide ongoing training and education to workers on handling chemicals safely and managing potential hazards, including those related to inspections and basic first-aid procedures in case of exposure. - Establish an emergency plan: Develop and communicate a clear emergency response plan for incidents involving chemical exposure, including the location of eyewash stations, emergency showers, and contact information for medical assistance. - Monitor and review control measures: Regularly review and update the control strategies to ensure their effectiveness in mitigating risks associated with inadequate lighting and chemical exposure during inspections. Implement any necessary changes or improvements to maintain a safe work environment.		
3. Setup	Electrical hazards, faulty equipment	3H	- Regular inspection and maintenance: Ensuring that the automatic transmission flusher is checked regularly for any signs of wear or malfunction, and scheduling routine maintenance to prevent the occurrence of electrical faults or equipment failure. - Proper training: Ensuring all staff operating the transmission flusher have undergone adequate training on the correct setup and usage procedures, important safety guidelines, as well as an understanding of potential risks involved in electrical hazards and faulty equipment. - Power source inspection: Thoroughly inspecting and testing power cables, plugs, and outlets before connecting the transmission flusher to ensure they are in good working condition and free from damage. - Circuit protection: Providing either a residual current device (RCD) or an appropriately rated circuit breaker to protect the team against electric shocks and electrical fires caused by short circuits and current overloads.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Adequate workspace lighting: Ensuring proper illumination in the work area to help operators avoid accidental contact with electrical components, identify potential hazards more easily, and perform setup tasks more accurately. - Clean work environment: Keeping the work area clean and clutter-free to minimise the risk of debris or contaminants interfering with the electrical components, potentially leading to shorts or other malfunctions within the equipment. - Safe storage and handling: Storing automatic transmission flushers and their accessories in a secure and organised manner, away from moisture or extreme temperatures, to protect them from damage that could lead to equipment failures and create electrical hazards. - Personal Protective Equipment (PPE): Mandating the use of appropriate PPE, such as safety goggles, gloves, and insulating footwear while setting up the automatic transmission flusher, to protect against hazards like electric shocks and injury from damaged equipment. - Signage and barriers: Displaying clear safety signage indicating potential electrical hazards and erecting physical barriers around the work area during setup to prevent unauthorised personnel from accidentally coming into contact with powered equipment. - Emergency preparedness: Having an emergency protocol in place, including the proper placement of fire extinguishers and first aid kits near the work area, alongside maintaining a list of emergency contacts for prompt assistance in case of electrical hazards or equipment malfunctions.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti se tions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im ementa of cont measures.	☐	☐	
Permit requirements specified, such as Hot Wor Electrical Work, W at Heights etc.	☐	☐	
SWMS identifies plant and equipment to be us d.	☐	☐	
Details of inspection checks required for any equipment listed ar noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
