

Bunsen Burner | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Bunsen Burner

Business Name: [Company Name]

ABN: [ABN]

SWMS#

Business Address: [Company Address]

Contact Person:

Phone: [Phone]

Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:

Signature:

Title:

Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS, as well as reviews and modifications of the SWMS.

Full Name:

Title:

Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED

NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS

Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, then to communicate those hazards and then to further take steps to either eliminate or control each hazard.

NAME

SIGNATURE

DATE

If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.

Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.

The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

CLIENT OR PRINCIPAL CONTRACTOR DETAILS

Client:	SCOPE OF WORKS Provide a detailed description of the specific work being carried out (otherwise known as scope of works).

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT

<input type="checkbox"/> involves a risk of a person falling more than 2 meters.	<input type="checkbox"/> is carried out on or near pressurised gas mains or piping.
<input type="checkbox"/> is carried out on a telecommunication tower.	<input type="checkbox"/> is carried out on or near chemical, fuel or refrigerant lines.
<input type="checkbox"/> involves demolition of an element of a structure that is load-bearing.	<input type="checkbox"/> is carried out on or near energised electrical installations or services.
<input type="checkbox"/> involves demolition of an element related to the physical integrity of a structure.	<input type="checkbox"/> is carried out in an area that may have a contaminated or flammable atmosphere.
<input type="checkbox"/> involves, or is likely to involve, disturbing asbestos.	<input type="checkbox"/> involves tilt-up or precast concrete.
<input type="checkbox"/> involves structural alteration or repair that requires temporary support to prevent collapse.	<input type="checkbox"/> is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
<input type="checkbox"/> is carried out in or near a confined space.	<input type="checkbox"/> is carried out in an area of a workplace where there is any movement of powered mobile plant.
<input type="checkbox"/> is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	<input type="checkbox"/> is carried out in areas with artificial extremes of temperature.
<input type="checkbox"/> is carried out in or near water or other liquid that involves a risk of drowning.	<input type="checkbox"/> involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY

<input type="checkbox"/> Forklift	<input type="checkbox"/> Crane/s	<input type="checkbox"/> Hoist/s	<input type="checkbox"/> Excavator	<input type="checkbox"/> Backhoe/Loader	<input type="checkbox"/> Boom Lift	<input type="checkbox"/> EWP	<input type="checkbox"/> Genie Lift
<input type="checkbox"/> Trencher	<input type="checkbox"/> Drilling Rig	<input type="checkbox"/> Trucks	<input type="checkbox"/> Formwork	<input type="checkbox"/> Bobcat	<input type="checkbox"/> Flammable Gas	<input type="checkbox"/> Fuel	<input type="checkbox"/> Dozer
<input type="checkbox"/> High Voltage	<input type="checkbox"/> Mulcher	<input type="checkbox"/> Tilt-up Panels	<input type="checkbox"/> Roller	<input type="checkbox"/> Scissor Lift	<input type="checkbox"/> Tractor	<input type="checkbox"/> Other -	

RISK MATRIX									
LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION	HEIRARCHY OF CONTROLS	
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE			Elimination Remove the hazard.	
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEED	Substitution Replace the hazard.	
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review before work starts.	Isolation Isolate People from the hazard	
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.	Engineering Isolate the hazard.	
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	Monitor and keep records	Administrative Change the work.	
Notes on Hierarchy of Controls: Elimination methods are the most effective and preferred when controlling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the third most effective, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Equipment) is the least effective method.									

PERSONAL PROTECTIVE EQUIPMENT (PPE)											
FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	EYE PROTECTION	RESPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

- persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
- persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
- workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Chemical spill, inhalation of harmful fumes	3H	<ul style="list-style-type: none"> - Proper Storage and Handling: Make sure that all chemicals used in the experiment are properly stored and handled. Store chemicals in well-ventilated areas, away from direct sunlight, heat sources, and incompatible substances. - Personal Protective Equipment (PPE): Provide appropriate PPE, such as lab coats, chemical-resistant gloves, and safety goggles to protect workers from chemical spills and splashes while handling chemicals. - Safe Work Practices: Train employees on how to safely handle chemicals and follow established procedures when using a Bunsen burner. This should include guidelines on proper heating techniques and avoiding rapid changes in temperature. - Adequate Ventilation: Ensure that the workspace has sufficient ventilation to prevent the buildup of harmful fumes. This may involve using a fume hood, installing an exhaust fan, or simply opening windows and doors for proper airflow. - Chemical Spill Kits: Have spill kits accessible and within easy reach to contain and clean up any accidental chemical spills immediately. These should be tailored to meet the specific needs of each laboratory and contain materials like absorbents, neutralizers, and waste disposal bags. - Emergency Procedures: Establish clear emergency procedures specific to the potential hazards associated with Bunsen burners and related processes. Regularly review these procedures with employees, and clearly display them in the laboratory for easy reference. - Regular Maintenance and Inspection: Schedule regular inspection and maintenance of equipment, including Bunsen burners, gas lines, and other components, to ensure they are safe and functional. - Safe Disposal of Waste Products: Properly dispose of any waste generated during the experiment using approved waste bins, containers, or collection systems designated for the specific substance(s). Ensure the waste is later disposed of in compliance with local regulations. - Restricted Access: Limit access to the area where the Bunsen burner is being used by implementing a controlled entry system or placing barriers around the perimeter. This will help to prevent unauthorised individuals from interfering with the experiment or being exposed to potential hazards. - Communication and Signage: Clearly communicate the location of Bunsen burners and associated risks using warning signs and labels. Regularly review these signs to ensure their visibility and clarity for all employees. - Continuous Monitoring and Supervision: Supervise the work area throughout the entire process to monitor the safe use of a Bunsen burner and ensure that all control measures are implemented effectively. Address any concerns, incidents, or emergencies promptly to mitigate risks and maintain a safe working environment. 	2M	
2. Bunsen Burner setup	Burns from flame, incorrect installation	3H	<ul style="list-style-type: none"> - Proper training: Ensure all workers operating the Bunsen burner have undergone proper training to understand the safe use and setup of the equipment. 	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> - Pre-use inspection: Inspect the Bunsen burner, hose, and gas supply for any signs of damage, wear or incorrect installation before every use. - Correct installation: Follow the manufacturer's guidelines for setting up the Bunsen burner, ensuring all parts are correctly assembled and secure. - Stable work surface: Set up the Bunsen burner on a flat, stable, and heat-resistant surface to prevent accidental tipping or sliding. - Appropriate protective gear: Make sure workers handling the Bunsen burner wear heat-resistant gloves, long sleeves, closed-toe footwear, and safety goggles to protect against burns and splashes. - No loose clothing: Ensure that workers don't wear loose clothing, dangling accessories, or have unsecured hair that could come into contact with the flame. - Clear workspace: Keep the area around the Bunsen burner clear of flammable materials, clutter, and debris to minimise fire hazards. - Safety equipment: Have an appropriate fire extinguisher and first-aid kit nearby in case of emergency. - Correct lighting procedure: Follow the recommended lighting procedure (using a striker or lighter) to minimise the risk of burns from the flame. - Proper ventilation: Ensure adequate ventilation to avoid the buildup of fumes or gas in the enclosed space. - Supervision: Monitor inexperienced workers closely while they set up and use the Bunsen burner to ensure correct procedures are being followed. - Gas shut-off: Know how to operate the gas shut-off valve in case the flame needs to be extinguished quickly. - Never leave unattended: Don't leave the Bunsen burner unattended while in operation to prevent accidents. - End-of-use checks: Upon finishing using the Bunsen burner, ensure it's correctly and fully turned off, cool down the workspace for a safe handling and storage. 		
3. Lighting the flame	Explosion, skin burns	4A	<ul style="list-style-type: none"> - Proper training: Ensure all personnel involved in lighting the Bunsen burner have received proper training and are familiar with the equipment's safe operation procedures. - Correct fuel: Verify that the gas source is non-flammable, such as methane or natural gas, and not an inappropriate or explosive fuel like propane or hydrogen. - Inspect equipment: Regularly examine the Bunsen burner, hoses, and connections for signs of wear or damage, and replace any faulty components promptly. - Secure connections: Double-check that all connections between the Bunsen burner and the gas source are tightened and properly fitted to prevent gas leaks. 	2M	

flammable fumes.

- Use safety equipment: Provide appropriate personal protective equipment including heat-resistant gloves or tongs, safety glasses, and lab coat against burns and other hazards.
- Clear workspace: Keep the surrounding area clean, and clear combustible materials to minimise fire risks.
- Light cautiously: When igniting the burner, use a spark lighter and keep hands at a safe distance from the flame.
- Gradual ignition: Slowly open the gas valve to control the flow rate adjustments that could lead to an explosion or excessive flame height.
- Monitor flames: Always visually inspect the flame during operation and remain alert to any changes or irregularities.
- Fire extinguisher access: Place a suitable fire extinguisher nearby, easily accessible and operational.
- Supervision: Maintain constant supervision while the burner is in use, and never leave it unattended.
- Emergency procedures: Establish and communicate a clear set of guidelines, including steps to shut off the gas supply, use fire extinguishers, and contact emergency services if necessary.
- Shutdown process: After use, ensure the flame is extinguished and the gas supply at the source. Allow the Bunsen burner to cool down before moving it to avoid burn injuries.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are needed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	<input type="checkbox"/>	<input type="checkbox"/>	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Name, signature, position and date signed of the person approving the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Specific personnel and qualifications, experience is noted in the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Provides a step-by-step process of tasks required to carry out the activity or task.	<input type="checkbox"/>	<input type="checkbox"/>	
Adequate risk assessment of any identified hazards has been completed.	<input type="checkbox"/>	<input type="checkbox"/>	
Foreseeable hazards are identified and documented for each step.	<input type="checkbox"/>	<input type="checkbox"/>	
Any hazards listed in any site risk assessments have been added to the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	<input type="checkbox"/>	<input type="checkbox"/>	
Check control measures added to the SWMS are the most effective solutions.	<input type="checkbox"/>	<input type="checkbox"/>	
Responsible person is assigned and listed on the SWMS for the implementation of control measures.	<input type="checkbox"/>	<input type="checkbox"/>	
Permit requirements specified, such as Hot Work, Electrical Work, Work at Heights etc.	<input type="checkbox"/>	<input type="checkbox"/>	
SWMS identifies plant and equipment to be used.	<input type="checkbox"/>	<input type="checkbox"/>	
Details of inspection checks required for any equipment listed are noted on the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Describes any mandatory qualifications, experience, training, skills required to perform the work.	<input type="checkbox"/>	<input type="checkbox"/>	
Applicable personal protective equipment is selected on the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Lists any required permits or licenses.	<input type="checkbox"/>	<input type="checkbox"/>	
Reflects and documents any legislative references and/or Australian Standards.	<input type="checkbox"/>	<input type="checkbox"/>	
Identifies any hazardous substances used with specific control measures in line with any SDS.	<input type="checkbox"/>	<input type="checkbox"/>
