

Cylindrical Grinder | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Cylindrical Grinder

Business Name: [Company Name]

ABN: [ABN]

SWMS#

Business Address: [Company Address]

Contact Person:

Phone: [Phone]

Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:

Signature:

Title:

Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS, as well as reviews and modifications of the SWMS.

Full Name:

Title:

Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED

NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS

Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, then to communicate those hazards and then to further take steps to either eliminate or control each hazard.

NAME

SIGNATURE

DATE

If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.

Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.

The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

CLIENT OR PRINCIPAL CONTRACTOR DETAILS

Client:	SCOPE OF WORKS Provide a detailed description of the specific work being carried out (otherwise known as scope of works).

<input type="checkbox"/> High Voltage	<input type="checkbox"/> Mulcher	<input type="checkbox"/> Tilt-up Panels	<input type="checkbox"/> Roller	<input type="checkbox"/> Scissor Lift	<input type="checkbox"/> Tractor	<input type="checkbox"/> Other -	

RISK MATRIX									
LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION	HEIRARCHY OF CONTROLS	
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE			Elimination Remove the hazard.	
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEED	Substitution Replace the hazard.	
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review before work starts.	Isolation Isolate People from the hazard	
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.	Engineering Isolate the hazard.	
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	Monitor and keep records	Administrative Change the work.	
Notes on Hierarchy of Controls: Elimination methods are the most effective and preferred when controlling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the third most effective, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Equipment) is the least effective method.									

PERSONAL PROTECTIVE EQUIPMENT (PPE)											
FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	EYE PROTECTION	RESPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

- persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
- persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
- workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Slips, trips, and falls, PPE inadequacy	2M	<ul style="list-style-type: none"> - Ensure the workspace is tidy and free of clutter, cables, or any other obstacles that might cause slips, trips, or falls. - Conduct a risk assessment before starting the task to identify potential hazards and implement appropriate control measures. - Clearly mark any areas where there may be an increased risk of slips, trips or falls, such as wet surfaces or uneven flooring. - Provide appropriate Personal Protective Equipment (PPE), including safety footwear with slip-resistant soles, safety glasses, gloves, and hearing protection, and ensure all workers are trained on its proper use and maintenance. - Make sure adequate lighting is available in the workspace, allowing workers to clearly see their surroundings and identify hazards. - Train workers on how to safely move heavy or awkward objects, such as a grinder, using proper manual handling techniques to avoid straining or overexertion. - Utilise anti-fatigue mats or non-slip floor coverings in areas where workers will be standing for extended periods to reduce foot fatigue and enhance overall stability. - Implement housekeeping procedures to maintain cleanliness and orderliness in the workspace, promptly addressing any hazards such as spills or debris that could contribute to slips, trips, or falls. - Install appropriate guardrails or barriers around any elevated platforms or openings in the floor to prevent falls from height. - Regularly inspect and maintain the cylindrical grinder, ensuring that all required safety features, such as emergency stops or guards, are present and functioning correctly. - Encourage a safety culture amongst workers by promoting open communication about workplace hazards, providing ongoing training, and recognizing those who demonstrate safe work practices. - Monitor and evaluate the effectiveness of implemented control measures regularly, making adjustments as needed to ensure ongoing improvement in eliminating risks associated with slips, trips, and falls, and PPE inadequacy. 	1L	
2. Machine Inspection	Electrical hazards, Inadequate guarding	3H	<ul style="list-style-type: none"> - Regular maintenance and inspection: Schedule and conduct regular maintenance and inspection of the cylindrical grinder to identify any potential electrical hazards or damaged guarding. - Insulation and grounding: Ensure proper insulation and grounding of electrical connections, plugs, and sockets to prevent electric shocks and short circuits. - Proper machine installation: Install the cylindrical grinder in accordance with manufacturer guidelines so that it is secure and stable, minimising the risk of vibration or movement affecting the integrity of the guarding. 	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> - Adequate guarding: Ensure all moving parts, including the grinding wheel and other rotating components, are adequately guarded according to the manufacturer's recommendations and local safety regulations. - Interlocking mechanisms: Install interlocking devices for the guarding, preventing the machine from starting if the guards are not correctly in place. - Emergency Stop button: Fit an easily accessible and clearly marked Emergency Stop button on the machine, allowing operators to quickly shut it down in case of any unforeseen issues or hazards. - Lockout/Tagout procedures: Implement a lockout/tagout procedure to ensure the machine is isolated from its power source during maintenance, repair, or any other operation that may expose workers to potential electrical hazards. - Staff training: Provide ongoing training for staff on the proper use and maintenance of the cylindrical grinder, emphasising the importance of inspecting and servicing the machine regularly. - Personal Protective Equipment (PPE): Mandate the use of appropriate PPE for workers handling or operating the machine, such as safety glasses, gloves, and hearing protection. - Non-contact safety devices: Consider installing non-contact safety devices like light curtains or presence-sensing safety devices to detect if someone enters the hazardous zone around the machine and immediately stop its operation. - Incident reporting: Encourage employees to promptly report any instances where guarding is found to be inadequate or compromised, or any other safety concerns, so that corrective measures can be taken immediately. 		
3. Clamping Workpiece	Entanglement, Collision with moving parts	3H	<ul style="list-style-type: none"> - Proper Training: Ensure that all operators working with the cylindrical grinder receive comprehensive training, covering the safe clamping technique, machine operation and potential hazards related to entanglement or collision. - Clear Communication: Establish clear communication protocols between machine operators, coworkers, and supervisors in the work area to avoid misunderstandings that could lead to accidents. - Pre-start Inspection: Conduct a thorough pre-start inspection of the cylindrical grinder and the workpiece before beginning any operations, ensuring all parts are in proper working condition. - Remove Loose items: Make sure workers remove any loose clothing, jewellery, or accessories which may get entangled with the moving part of the cylindrical grinder during the clamping process. - Use Proper PPE: Provide and mandate the use of appropriate Personal Protective Equipment (PPE) such as gloves, eye protection, and safety footwear for workers handling the clamping process. - Guarding: Make certain all guards are installed correctly and secure around hazardous moving parts to prevent collisions or accidental contact. 	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> - Implement Safe Work Procedures: Develop written safe work procedures detailing the correct way to securely clamp workpieces without risking entanglement or collision with moving parts. - Regular Maintenance & Inspection: Schedule regular maintenance and inspections on the cylindrical grinder to ensure clamps and other machinery components are in good working condition. - Limit Access to Authorised Personnel Only: Restrict access around the cylindrical grinder to only those individuals who have been trained and are authorised to operate the machine, reducing the risk of accidents caused by unauthorised personnel. - Shutdown Procedure: Establish a procedure for shutting down the grinder in the event of an emergency to prevent incidents involving entanglement or contact with moving parts. - Signage and Displacement: Appropriate signage identifying the risks associated with clamping workpieces on the cylindrical grinder, including warnings about potential entanglements and collisions. - Periodic Audit and Reviews: Organise regular audit and review of equipment, procedures, and employee compliance to ensure best practices are being followed and that potential hazards are adequately addressed.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are needed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	<input type="checkbox"/>	<input type="checkbox"/>	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Name, signature, position and date signed of the person approving the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Specific personnel and qualifications, experience is noted in the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Provides a step-by-step process of tasks required to carry out the activity or task.	<input type="checkbox"/>	<input type="checkbox"/>	
Adequate risk assessment of any identified hazards has been completed.	<input type="checkbox"/>	<input type="checkbox"/>	
Foreseeable hazards are identified and documented for each step.	<input type="checkbox"/>	<input type="checkbox"/>	
Any hazards listed in any site risk assessments have been added to the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	<input type="checkbox"/>	<input type="checkbox"/>	
Check control measures added to the SWMS are the most effective solutions.	<input type="checkbox"/>	<input type="checkbox"/>	
Responsible person is assigned and listed on the SWMS for the implementation of control measures.	<input type="checkbox"/>	<input type="checkbox"/>	
Permit requirements specified, such as Hot Work, Electrical Work, Work at Heights etc.	<input type="checkbox"/>	<input type="checkbox"/>	
SWMS identifies plant and equipment to be used.	<input type="checkbox"/>	<input type="checkbox"/>	
Details of inspection checks required for any equipment listed are noted on the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Describes any mandatory qualifications, experience, training, skills required to perform the work.	<input type="checkbox"/>	<input type="checkbox"/>	
Applicable personal protective equipment is selected on the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Lists any required permits or licenses.	<input type="checkbox"/>	<input type="checkbox"/>	
Reflects and documents any legislative references and/or Australian Standards.	<input type="checkbox"/>	<input type="checkbox"/>	
Identifies any hazardous substances used with specific control measures in line with any SDS.	<input type="checkbox"/>	<input type="checkbox"/>
