

Gantry Crane | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Gantry Crane

Business Name: [Company Name]

ABN: [ABN]

SWMS#

Business Address: [Company Address]

Contact Person:

Phone: [Phone]

Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:

Signature:

Title:

Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS, as well as reviews and modifications of the SWMS.

Full Name:

Title:

Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED

NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS

Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, then to communicate those hazards and then to further take steps to either eliminate or control each hazard.

If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.

Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.

The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

RISK MATRIX									
LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION	HEIRARCHY OF CONTROLS	
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE			Elimination Remove the hazard.	
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEED	Substitution Replace the hazard.	
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review before work starts.	Isolation Isolate People from the hazard	
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.	Engineering Isolate the hazard.	
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	Monitor and keep records	Administrative Change the work.	
Notes on Hierarchy of Controls: Elimination methods are the most effective and preferred when controlling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the third most effective, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Equipment) is the least effective method.									

PERSONAL PROTECTIVE EQUIPMENT (PPE)											
FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	RESPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED	
											
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

- persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
- persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
- workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Unstable conditions, Electrical hazards	3H	<ul style="list-style-type: none"> - Conduct a thorough pre-start safety inspection of the area, checking for uneven or unstable ground conditions that could cause the gantry crane to tip or shift during operation. - Ensure proper maintenance and regular inspection of the gantry crane in accordance with manufacturer guidelines, and take corrective actions if necessary. - Provide appropriate safety training on the safe operation of the gantry crane, including a review of potential hazards, for all relevant workers. - Establish clearly defined work zones, using safety barriers or high-visibility cones, and ensure all non-essential personnel are excluded from the area during crane operation. - Implement a safety checklist to be completed before the commencement of each work shift, confirming all safety protocols in place and identifying any deviations or potential hazards. - Utilise lockout/tagout procedures to isolate any electrical sources or equipment connected to the gantry crane prior to operation and prevent possible risks of electrocution. - Display appropriate caution signs and warning labels, such as "Danger: High Voltage" or "Keep Clear: Crane Operation", to raise awareness of potential hazards around the work site. - Develop an emergency action plan that outlines steps to be taken in case of an accident involving the gantry crane, and ensure all workers are familiar with it. - Instruct staff to wear appropriate personal protective equipment (PPE) at all times, including hard hats, safety boots, high-visibility clothing, and gloves. - Regularly assess weather conditions in the work area, prioritise safe conditions for operations, and postpone the use of the gantry crane during extreme weather events, such as high winds, heavy rain, or lightning storms, which may pose increased risks of accidents. - Encourage open communication among all workers involved in the crane operation, empowering them to report potential hazards or concerns without fear of penalty, so as to facilitate a safer work environment. 	2M	
2. Pre-operation inspection	Crane malfunction, Incorrect load calculations	3H	<ul style="list-style-type: none"> - Conduct a comprehensive inspection of the gantry crane prior to operation, including all mechanical and electrical components, to ensure that the crane is in proper working condition. - Verify that the crane's capacity matches or exceeds the lift's load weight and ensure compliance with manufacturer guidelines for safe operation. - Ensure all operators have completed relevant training and certification for safely operating gantry cranes and are familiar with its operational procedures. 	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> - Implement a regular maintenance schedule for the gantry crane to minimise the risk of malfunction and check the service logs before each use. - Utilise accurate load calculations and ensure that the weight of the load is evenly distributed to avoid overloading or imbalance issues. - Employ the use of an independent third-party inspector, if required, to assess the structural integrity and functionality of the crane, along with verifying load calculations and limits. - Verify that all hydraulic systems and ropes/cables are in good condition without any visible signs of wear, tear, or damage that might adversely affect the lifting capacity of the crane. - Establish clear communication protocols for operators and ground personnel to relay information related to loads, their weight, and positioning requirements. - Incorporate redundant safety features such as limit switches and overload alarms that will help to prevent accidents resulting from improper loading, crane malfunctions, or other factors. - Ensure there is proper signage and barrier zones surrounding the crane operation area so non-essential personnel know not to enter the restricted work zone where potential hazards may arise. - Develop and implement detailed emergency response procedures to address situations where the crane experiences unexpected problems or malfunctions during operations, ensuring quick resolution to minimise risks to workers and property. 		
3. Load rigging	Load slipping, Insufficient safe work zone	3H	<ul style="list-style-type: none"> - Rigging Inspection: Conduct regular inspections of rigging equipment to ensure it is in good working condition and free from defects or damages. - Load Rating Check: Verify that the load to be lifted does not exceed the gantry crane's SWL (Safe Working Load) and the capacity of rigging equipment. - Load Balance and Stability: Ensure proper balance and stability of the load during the lifting operation by using appropriate rigging techniques. - Rigging Training: Provide relevant rigging training to workers to ensure they understand correct methods for securing loads, as well as identifying potential hazards and implementing control measures. - Safe Work Zone Establishment: Create a restricted work area around the gantry crane and prohibit unauthorised personnel from entering this zone during lifting operations. - Lift Plan Implementation: Develop and execute an effective lift plan, which includes communication protocols, hazard identification, necessary control measures, and contingency plans. - Supervision and Communication: Continuous supervision of the lifting operation by a competent person and maintaining clear communication between all parties involved, including crane operator, rigger, and signalperson. 	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> - Personal Protective Equipment and Safety Gear: Require workers to wear appropriate PPE such as gloves, safety boots, hard hats, and high-visibility vests while participating in rigging and lifting activities. - Pre-Lift Briefings: Conduct briefings with all workers involved in the lifting operation to discuss the lift plan, task roles, hazard recognition, and emergency procedures. - Emergency Stop Controls: Ensure that gantry crane has functional emergency stop controls within easy reach of the operator, to enable a prompt response to unexpected issues during the lifting process. - Regular Monitoring and Maintenance: Implement ongoing monitoring of rigging and lifting activities, as well as periodic maintenance checks on the gantry crane and associated equipment to ensure their continued safe operation.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are needed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	<input type="checkbox"/>	<input type="checkbox"/>	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Name, signature, position and date signed of the person approving the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Specific personnel and qualifications, experience is noted in the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Provides a step-by-step process of tasks required to carry out the activity or task.	<input type="checkbox"/>	<input type="checkbox"/>	
Adequate risk assessment of any identified hazards has been completed.	<input type="checkbox"/>	<input type="checkbox"/>	
Foreseeable hazards are identified and documented for each step.	<input type="checkbox"/>	<input type="checkbox"/>	
Any hazards listed in any site risk assessments have been added to the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	<input type="checkbox"/>	<input type="checkbox"/>	
Check control measures added to the SWMS are the most effective solutions.	<input type="checkbox"/>	<input type="checkbox"/>	
Responsible person is assigned and listed on the SWMS for the implementation of control measures.	<input type="checkbox"/>	<input type="checkbox"/>	
Permit requirements specified, such as Hot Work, Electrical Work, Work at Heights etc.	<input type="checkbox"/>	<input type="checkbox"/>	
SWMS identifies plant and equipment to be used.	<input type="checkbox"/>	<input type="checkbox"/>	
Details of inspection checks required for any equipment listed are noted on the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Describes any mandatory qualifications, experience, training, skills required to perform the work.	<input type="checkbox"/>	<input type="checkbox"/>	
Applicable personal protective equipment is selected on the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Lists any required permits or licenses.	<input type="checkbox"/>	<input type="checkbox"/>	
Reflects and documents any legislative references and/or Australian Standards.	<input type="checkbox"/>	<input type="checkbox"/>	
Identifies any hazardous substances used with specific control measures in line with any SDS.	<input type="checkbox"/>	<input type="checkbox"/>
