

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PLOT OF THE PROJECT								
Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (k BU) is required to surface a safe work method statement (SWMS) is prepared before the proposed work starts.								
)

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Electrical hazards, Slips and trips	ЗН	 Properly inspect all power sources and electrical outlets before plugging in the jig saw to prevent electrical hazards. Make use of appropriate residual current device (RCDs) for added protection against electrical shocks. Inspect the jig saw's electrical cord for any one of neur, damage or fraying before each use and replace if necessary. Keep the work area well-litted of free from clutter, obris or an unnecessary materials that could result in site trips or falls. Ensure that work of a can be aring opportate footwear with slip-resistant soles while operation of jig saw? Utilise floor nerkings and esignates of neuver around the work area comfor bly preduct be risk of accidents due to limited movement. Establing a power how ekceping routine that includes regular cleaning and ninten a conce workspace to keep it tidy and hazard-free. Traction oyees on proper handling techniques when lifting and transporting heavy naterials are expected, reducing the risk associated with slips, trips or falls. Discuss and display clear guidelines on emergency response procedures in case of an electrical hazard or slip/trip accident; ensure all workers are aware of their roles and responsibilities during such events. Conduct regular safety audits and risk assessments to identify any operational changes or emerging hazards, implementing necessary controls and measures to maintain a safe work environment. 	2М	
2. Assess Materials	Sharp edges, Pinch points	2M	 Perform a visual inspection of the materials to identify any sharp edges or pinch points before handling. Ensure that workers wear appropriate personal protective equipment (PPE), such as cut-resistant gloves, when handling materials with sharp edges or pinch points. Use tools, such as edge protectors and clamps, to cover or eliminate sharp edges or pinch points while working on materials. Implement proper handling techniques for lifting, carrying, and setting down materials, such as keeping fingers away from sharp edges and using wide grips to minimise the risk of pinching. 	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Provide comprehensive training on safe work practices related to handling materials with sharp edges or pinch points, including the correct use of PPE and handling procedures.		
			- Implement a buddy system to have a second		
			- Maintain clean and organised workspaces, suring part materials with sharp edges or pinch points are properly stored away provot traffic and work areas to prevent accidents.		
			- Install safety guards on jigsa, for other machinely is a copriate to prevent contact with sharp entry ping points during operation.		
			- Communicate azards received to the provide state of pinch points clearly through safety signs of marked zeroes in the park of a.		
			- Recently reaches a mupdate standard operating procedures and risk assessments to a must for new materials, equipment or workflow changes that could a recence added half risks related to sharp edges or pinch points.		
			Inspect the putter supply and cords before use: Ensure that the jig saw is to nected to a reliable power source, and that all power cords are in good working condition without fraying or exposed wiring.		
			Ise appropriate personal protective equipment (PPE): Wear safety goggles, g. pes, and non-slip footwear while operating the jig saw to minimise the risk of injury due to flying debris or accidental contact with the blade.		
			- Test the jig saw on a scrap piece of material before starting work: This will help identify any issues with misalignment or electrical problems before work begins.		
			- Ensure proper grounding: Verify that all electrical connections are properly grounded to prevent electric shocks and other electrical hazards.		
3. Jig Saw Set Up	Electrical hazards, Misalignment	ЗH	- Regularly inspect the jig saw for wear and tear: Perform routine checks on the jig saw's motor, blades, and alignment mechanisms to ensure continued safe operation.	1L	
			- Use appropriate blade type and size for the task: Choose the correct jig saw blade for the material being cut, ensuring it is in good condition and securely attached to the tool.		
			- Keep work area clean and clutter-free: A tidy workspace minimises the chances of accidents and reduces the likelihood of electrical hazards and tool misalignment.		
			- Secure workpiece: Make sure the workpiece being cut is safely clamped or otherwise secured to prevent shifting during cutting, which can lead to misalignment and potential injuries.		
			- Maintain a proper posture while using the jig saw: Stand firmly and maintain balance to avoid slips or falls while operating the power tool.		

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Never disable safety features on the jig saw: Ensure that safety guards, interlocks, and other features designed to prevent accidents remain in place and functional at all times.		
			- Unplug the jig saw when not in use: Disconney one power source when making adjustments, changing blades or taking brace to minimise the risk of electrical shock.		
			- Provide adequate lighting: Ensure the work a second vell-lit to maximise visibility and prevent accidents due to poor lighting conditions		
			- Implement a lockout-tagout seem: When performing the denance or addressing issues with the jig sectors a lock ut-tagout system to devent accidental activation of the tool while react is been performed.		
4. Saw Blade Installation	Lacerations, Pinch poms	2M		1L

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAF WC A STHUD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to review the sure it remains revised if necessary) if relevant control measure are a conconsultation with workers (including contractors are subcontract of the SWMS and their health and safety representatives who re workplace.

ke sure it remains effective and must be reviewed (and acception of the process should be carried out in s any subcontract s) who may be affected by the operation esentatives who recented that work group at the

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

- 1. Spot Checks.
- 2. Consultation with workers, contractors and sub-contractors.
- 3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.			
Names and signatures of all relevant personnel consulted during the development of the SWMS.		P	
Name, signature, position and date signed of the person approving the SWMS.			
Specific personnel and qualifications, experience is noted in the SWMS.			
Provides a step-by-step process of tasks required to carry out the activity or task.			
Adequate risk assessment of any identified hazards has been completed.			
Foreseeable hazards are identified and documented for each step.			
Any hazards listed in any site risk assessments have been added to the SWN			
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.			
Check control measures added to the SWMS are the most effecting sections.			
Responsible person is assigned and listed on the SWMS for the impement of continue measures.			
Permit requirements specified, such as Hot Wren Electrical Work, Versat Heights etc.			
SWMS identifies plant and equipment to be up.			
Details of inspection checks required for any equipment listed ar noted on the SWMS.			
Describes any mandatory qualifications, experience vaining skills required to perform the work.			
Applicable personal protective equipment is selected on the SWMS.			
Lists any required permits or licenses.			
Reflects and documents any legislative references and/or Australian Standards.			
Identifies any hazardous substances used with specific control measures in line with any SDS.
