Low Voltage Power Supply | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Low Voltage Power Supply

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:	
Contact Phone:	
Project Manager Signature:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters.	☐ is carried out on or near pressurised gas mains or piping.
☐ is carried out on a telecommunication tower.	☐ is carried out on or near chemical, fuel or refrigerant lines.
☐ involves demolition of an element of a structure that is load-be	☐ is carried out on or near energised electrical installations or services.
☐ involves demolition of an element related to the physical integrit of a stru	☐ is carried out in an area that may have a contaminated or flammable atmosphere.
☐ involves, or is likely to involve, disturbing as stos.	☐ involves tilt-up or precast concrete.
☐ involves structural alteration or repair that re mporar upp to prevent collapse.	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
☐ is carried out in or near a confined space.	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant.
☐ is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY							
☐ Forklift	☐ Crane/s	☐ Hoist/s	☐ Excavator	☐ Backhoe/Loader	☐ Boom Lift	☐ EWP	☐ Genie Lift
☐ Trencher	☐ Drilling Rig	☐ Trucks	☐ Formwork	☐ Bobcat	☐ Flammable Gas	☐ Fuel	☐ Dozer
☐ High Voltage	☐ Mulcher	☐ Tilt-up Panels	☐ Roller	☐ Scissor Lift	☐ Tractor	☐ Other -

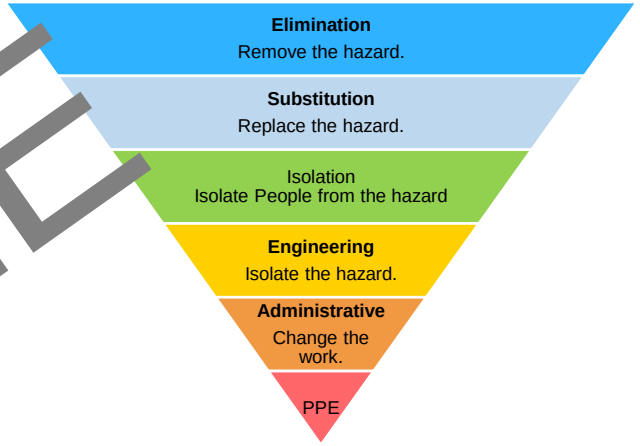
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost e ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Electrical shock, tripping hazards	2M	- Inspection and assessment of the work environment before starting work to identify potential electrical hazards and tripping hazards. - Ensuring workers are equipped with appropriate Personal Protective Equipment (PPE) such as insulated gloves, safety glasses, and non-conducive footwear. - Clear communication and signage to indicate the presence of low voltage power supply in the area and to maintain general awareness among workers. - Training workers on proper handling of electrical equipment and tools, emphasising the risk of electrical shock and trip hazards. - Keeping the workspace clean and clutter-free, removing any obstacles that could lead to trip hazards, and ensuring proper housekeeping practices are in place. - Making use of cord covers or cable protectors to eliminate the chance of tripping over exposed cables and wiring. - Establishing designated walkways around the workspace, keeping them clear from electrical cords, extension leads, and other potential trip hazards. - Utilising battery-powered or cordless equipment wherever possible to reduce the number of cables in the work area. - Routinely inspecting and maintaining all electrical equipment being used to ensure it is functioning as intended, free of defects or damage, and in compliance with relevant standards. - Implementing a strict 'tag out' or lockout/tagout procedure for any faulty or damaged electrical equipment that needs repair. - Encouraging workers to report any identified hazards immediately to their supervisor or manager to facilitate timely mitigation measures. - Developing emergency response plans for potential accidents relating to low voltage power supply and regularly conducting drills to refresh worker's knowledge and preparedness. - Utilising Ground Fault Circuit Interrupters (GFCIs) to minimise the risk of electrical shock by detecting fault currents and disconnecting power supply when necessary. - Regularly reviewing and updating Safe Work Method Statements (SWMS) as new information arises, equipment changes, or workplace conditions evolve, ensuring ongoing risk management is robust and responsive.	1L	
2. LV Switchboard Inspection	Arc flash, energised components	3H	- Proper Arc Flash Hazard Assessment: Conduct a thorough arc flash hazard assessment to determine the potential incident energy and appropriate Personal Protective Equipment (PPE) requirements for the specific task. - Lockout/Tagout Procedure Implementation: Ensure proper isolation and de-energization of electrical equipment, following established Lockout/Tagout procedures, before inspecting any LV switchboard components.	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Testing for Voltage Absence: Utilise appropriate test instruments such as a voltage tester or multimeter, to confirm that any energised components have been successfully isolated and de-energised. - Insulation/Barrier Installation: Provide adequate insulation or barrier material around energised components to prevent accidental contact during the switchboard inspection process. - Regular Inspection and Maintenance: Schedule regular inspection and maintenance for all LV switchboards to prevent the occurrence of hazardous situations, including loose connections or deteriorated equipment. - Qualified and Trained Personnel: Only allow workers who have completed relevant training in electrical safety and are qualified to work with Low Voltage Power Supply, to perform inspections on LV switchboards. - Use of Appropriate PPE: Ensure that workers are wearing the correct Personal Protective Equipment (PPE), such as flash-resistant clothing, gloves, and face shields, based on the findings of the Arc Flash Hazard Assessment. - Adherence to Safe Work Practices: Provide easily accessible Standard Operating Procedures (SOPs) and Safe Work Method Statements (SWMS) for the inspection of LV switchboards, and enforce strict adherence to these guidelines. - Emergency Response Preparedness: Develop an emergency response plan in case of incidents related to arc flash or energised components, including the availability of communication systems, first aid supplies, and evacuation routes. - Continuous Improvement and Monitoring: Continuously monitor and review the implemented control measures to ensure their effectiveness in reducing risks associated with arc flash and energised components during the LV Switchboard Inspection work step. Make necessary improvements based on findings from regular reviews and incident analysis. By implementing these control measures, workplace safety during Low Voltage Switchboard Inspections can be improved, reducing the risk of accidents and ensuring a healthier working environment for all employees.		
3. Equipment Isolation	Wrong gear isolation, live component contact	3H	- Proper identification of the equipment: Clearly label or tag all low-voltage power supply units to avoid incorrect isolation or work on live components. - Implementation of Lockout/Tagout (LOTO) procedures: Implement a systematic LOTO procedure to ensure that all relevant equipment is properly isolated, and workers are protected from unexpected startup or re-energization. - Use of insulated tools and personal protective equipment (PPE): Utilise insulated tools and appropriate PPE, such as rubber gloves and safety goggles, when working with potentially energised components to minimise the risk of electrical shock. - Verification of zero energy state: Before starting any work, always verify that the equipment is in a zero-energy state by checking for the absence of voltage using voltage testers or multimeters.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Regular inspection and maintenance of equipment: Conduct regular inspections and maintenance of electrical machinery, including safety features and precautions, to ensure that they function correctly and minimise hazards. - Provision of adequate training and supervision: Ensure that all workers involved have received adequate training and competence in safe work practices, including recognizing potential hazards and selecting appropriate control measures. - Maintaining updated safety documentation: Maintain up-to-date safety data sheets, electrical schematics, and other essential safety documentation for proper reference and compliance with Workplace Health and Safety requirements. - Established protocols for high-risk activities: Develop and implement well-defined safety protocols for high-risk activities such as live component work or isolations, ensuring full accountability and management oversight. - Emergency response plan: Develop and implement an emergency response plan that includes immediate actions to be taken in case of an accident or injury related to low voltage electrical work. - Routine safety audits and hazard assessments: Conduct regular safety audits and hazard assessments of the workplace environment to identify potential risks and develop suitable control measures to improve overall safety performance.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti[illegible]ions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im[illegible]of cont[illegible]measures.	☐	☐	
Permit requirements specified, such as Hot Wor[illegible]Electrical Work, W[illegible]t Heights etc.	☐	☐	
SWMS identifies plant and equipment to be u[illegible].	☐	☐	
Details of inspection checks required for any equipment listed a[illegible]noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training[illegible]skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
