Mini Skid Steer Equipment | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Mini Skid Steer Equipment

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:

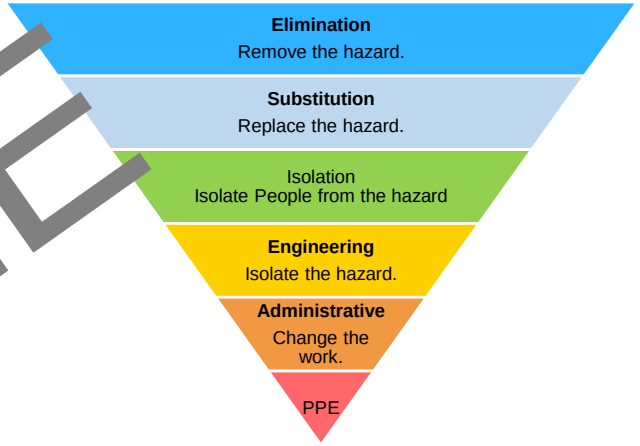
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost e ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Slips, Trips, and Falls, Falling Objects	2M	- Prior to starting the work, ensure that proper housekeeping is conducted in the area, removing debris and potential tripping hazards. - Designate a clear path for the movement of the mini skid steer and establish barricades to prevent unauthorised access, protecting workers from vehicle-related incidents. - Inspect the skid steer equipment, ensuring that all safety features are operational and guards are in place to protect operators from falling objects. - Conduct a comprehensive toolbox talk before commencing the work, emphasising the importance of vigilance against slip, trip, and fall hazards. - Provide workers with appropriate personal protective equipment (PPE), such as steel-toed boots and high-visibility vests, to minimise the risk of injury during transportation and handling of the mini skid steer. - Maintain an organised and clutter-free workspace by stacking materials neatly, providing adequate storage for tools, and clearly marking work zones. - Implement a strict 'no loads over people' policy for the mini skid steer, lowering the risk of dropped object incidents while lifting or moving materials. - Ensure regular breaks for operators and laborers to help maintain focus, reduce fatigue, and prevent careless accidents. - Install anti-slip coverings on elevated surfaces like ramps or walkways when necessary, reducing the likelihood of accidents related to slips and trips. - Monitor weather conditions for rain, wind, or other factors that may increase the risk of slips, trips, and falls; take appropriate action to counteract any potential hazardous change in conditions. - Regularly review and update the SWMS to reflect any changes in the work process or new hazards, keeping workers informed and trained on the latest control measures.	1L	
2. Inspection	Unauthorised access, Moving parts hazards	3H	- Restricted access: Ensure that only authorised personnel with necessary qualifications and training are permitted to operate the Mini Skid Steer Equipment. - Clear signage: Install appropriate warning signs around the work area to alert workers and others of potential hazards related to moving parts and unauthorised access. - Regular inspection: Conduct regular equipment checks to identify any potential risks, wear or component failure, and address them immediately to prevent accidents. - Safety barriers: Erect safety barriers, such as temporary fencing or rope barriers, around the work area to contain the risks associated with moving parts, and to prevent any unauthorised entry.	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Lockout/tagout procedures: Implement a proper lockout/tagout system for the Mini Skid Steer Equipment to ensure it is not accidentally started by someone who is not authorised or trained to use it. - Emergency stop button: Ensure the Mini Skid Steer Equipment is equipped with a readily accessible and operational emergency stop button or similar device in case of an emergency. - PPE provision: Provide appropriate personal protective equipment (PPE) for all authorised personnel operating the Mini Skid Steer Equipment, such as safety shoes, gloves, eye protection, and high visibility clothing. - Training programs: Provide ongoing training and education programs for all workers involved in the operation of the Mini Skid Steer Equipment, ensuring they are familiar with its functions, potential hazards, and control measures. - Pre-operation inspections: Require operators to perform a thorough pre-operation inspection, checking for any visible defects, loose components, or other potential hazards before commencing work with the Mini Skid Steer Equipment. - Communication systems: Establish a clear communication system among workers and supervisors on-site, including the use of radios, hand signals, and designated spotters, to help prevent incidents involving unauthorised access or moving parts hazards. - Incident reporting and investigation: Encourage workers to report any near misses or incidents involving the Mini Skid Steer Equipment, and conduct thorough investigations to identify root causes and implement corrective actions to prevent future occurrences.		
3. Load Materials	Manual handling hazards, Unstable loads	3H	- Proper training and instructions: Ensure all workers involved in the task have received adequate training on proper manual handling techniques, including lifting, carrying, and lowering loads without causing strain. - Assess the weight and nature of materials: Evaluate the type, size, and weight of the load before attempting to move it. If necessary, use mechanical aids or divide the load into smaller manageable parts. - Plan the route and work area: Arrange a clear and unobstructed path for moving the load. Keep the work area clean, organised, and free from trip hazards. - Use correct lifting techniques: Encourage workers to use their legs rather than their back to lift heavy or bulky objects, keeping the load close to the body, and avoiding twisting movements. - Provide regular breaks for workers: Schedule frequent rest periods to help prevent fatigue and strain caused by heavy or repetitive lifting tasks. - Promote team lifting: When feasible, advocate for team lifting as an effective way to minimise the risk of injury while distributing the load's weight evenly among the group.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Employ mechanical aids: Utilise appropriate mechanical equipment such as pallet trucks, hoists, forklifts, or trolleys to aid with material movement. - Inspect the Mini Skid Steer Equipment: Conduct r e equipment checks, ensuring that all parts are functioning correctly a securely attached. - Conduct pre-use safety checks: Assess t ini Skid St Equipment before each task to confirm it is safe to operate and appr iately s iced and maintained. - Stabilise loads properly: Secure and balance t oads using a opriate restraints or netting to ensure stable tra portation. - Implement a buddy system: P up workers who c ist one another with manual handling ta iding port, guidance, a d reducing the risk of injury. - Develop em gency proce ures: C te and mmunicate clear emergency plans to address a cidents in ving uns ads or material handling incidents. - Mai Open mm nication: Encourage workers to communicate any concerns regard workloa safety, allowing for adjustments as needed. - Ensu ad uate su rvision: Supervise manual handling activities closely, providi feed ck and pport when necessary, and intervening when unsafe ractices re ob rved.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti[illegible]ions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im[illegible]of cont[illegible]measures.	☐	☐	
Permit requirements specified, such as Hot Wor[illegible]Electrical Work, W[illegible]t Heights etc.	☐	☐	
SWMS identifies plant and equipment to be u[illegible].	☐	☐	
Details of inspection checks required for any equipment listed a[illegible]noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training[illegible]skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
