PVC Pipe Belling Mould | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: PVC Pipe Belling Mould

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

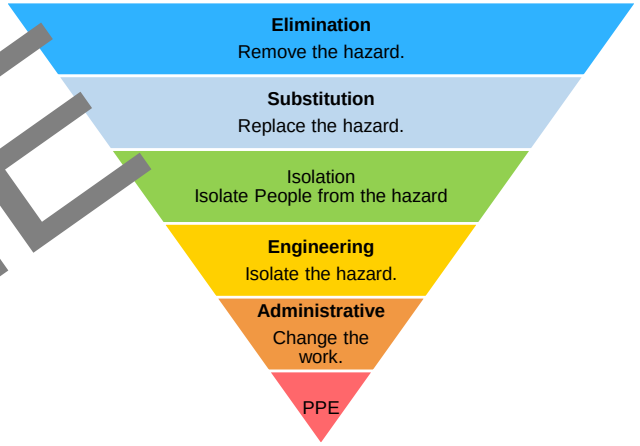
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost ef ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Trip hazards, inadequate ventilation	2M	- Clear and organise the workspace prior to starting work on the PVC Pipe Belling Mould, ensuring that any clutter or materials not required for the task are removed to reduce trip hazards. - Mark out a designated working area using physical barriers or high-visibility tape to separate the belling mould operations from other activities within the workspace, minimising the risk of tripping over equipment or materials. - Ensure adequate lighting is available in the workspace, enabling workers to easily identify and avoid potential trip hazards. Regularly check and replace any faulty lighting as necessary. - Provide appropriate personal protective equipment (PPE) such as non-slip footwear to workers to minimise the likelihood of slipping or tripping while handling the PVC Pipe Belling Mould. - Utilise floor mats and/or anti-fatigue mats to improve traction in areas where slippery surfaces may be present, reducing the risk of falls. - Clearly mark any changes in elevation, steps, or edges within the workspace with high-visibility paint or tape to prevent trips and falls. - Properly maintain all tools and equipment used during the PVC Pipe Belling Mould process, including regular inspections and repairs as needed to ensure optimum safety and efficiency. - Verify that the workspace has adequate ventilation to prevent the buildup of any harmful fumes or gases that could result from the PVC Pipe Belling Mould process. If needed, install additional ventilation systems or open windows/doors to increase airflow. - Train workers on the proper procedures for handling the PVC Pipe Belling Mould and associated materials, including steps to avoid accidental spills or contact with hazardous substances that could contribute to slip and trip hazards. - Regularly review and update the Safe Work Method Statement (SWMS) for the PVC Pipe Belling Mould process, incorporating any new control measures or improvements based on recent incidents or near-misses to continuously improve safety in the workplace.	1L	
2. Machine Setup	Electrical hazards, pinch points	2M	- Regular inspection of electrical equipment: Make sure that all electrical equipment including machines, power tools, and extension cords are inspected for damage or wear on a regular basis. This will help minimise electrical hazards in the workplace. - Ground-fault circuit interrupters (GFCIs): Install GFCI devices to protect against electrocution in case of ground faults and short circuits in electrical equipment. - Proper training for machine operators: Ensure that machine operators are fully trained and qualified to perform the task at hand, including understanding the potential hazards and control measures required for machine setup.	1L	

SAMPLE

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Lockout/tagout procedures: Implement lockout/tagout procedures for machines during setup, maintenance, and repair to prevent unintended startup and the release of stored energy. - Use of machine guards: Make sure that all dangerous moving parts and pinch points are covered by effective machine guarding to safeguard workers from potential risks. - Emergency stop buttons: The machine should be designed and equipped with accessible emergency stop buttons that can be easily activated by operators during setup to halt the machine if risky exposures are detected. - Personal protective equipment (PPE): Provide appropriate PPE, such as gloves, safety glasses, and high-visibility vests, for employees involved in the machine setup process to minimise the risk of accidents and injuries. - Workspace organisation: Keep work areas clean, organised, and free from obstructions to minimise potential accidents due to slip, trip, or fall hazards in the PVC pipe welding machine area. - Proper lifting techniques: Train workers in safe manual handling and lifting techniques to avoid strain injuries when setting up machines and components. - Ergonomic considerations: Ensure that machine controls, panels, and screens are positioned ergonomically to minimise discomfort and repetitive stress injuries for operators during setup. - Implement "buddy system": Encourage workers to use the buddy system during machine setup tasks in order to watch out for each other and prevent accidents or injuries due to unexpected hazards. - Regular hazard assessments: Conduct ongoing hazard assessments right from the machine setup stage to identify potential risks and implement appropriate mitigative actions on time. - Encourage open communication: Foster a work environment that encourages open communication among team members and supervisors, so they feel comfortable reporting any workplace hazards or safety concerns immediately.		
3. Pipe Cutting	Flying debris, noise exposure	3H	- Safety goggles or face shields: Equip all personnel involved in pipe cutting with safety goggles or face shields to provide protection from flying debris during the cutting process. - Noise-cancelling earmuffs or earplugs: Provide workers with hearing protection equipment, such as noise-cancelling earmuffs or earplugs, to reduce the risk of noise-induced hearing damage. - Regular machine maintenance: Ensure regular maintenance and inspection of cutting equipment to prevent potential malfunctions or unexpected breakdowns, reducing the chances of flying debris.	2M

SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Proper training on equipment handling: All workers must receive proper training and certification in operating cutting equipment to ensure they are competent in using the machinery safely and effectively. - Safe work areas: Keep the work area clean, organised, and free from clutter to minimise tripping hazards, making it easier for employees to navigate around the cutting area. - Use of guarding or barriers: Install appropriate physical guards or barriers around the cutting area to protect workers and increase their awareness of potential hazards, including flying debris and excessive noise levels. - Appropriate signage: Place clear and visible hazard signs near the cutting area to warn workers and visitors about the risk of flying debris and excessive noise levels when approaching the workspace. - Provision of first aid kits: Make sure first aid kits are readily available and well-stocked in case of any injuries resulting from flying debris or other cutting-related hazards. - Emergency shutdown procedures: Establish clear emergency shutdown procedures for equipment, ensuring staff is trained in their implementation to promptly stop machinery in case of incidents relating to flying debris. - Regular risk assessments: Conduct routine risk assessments of the workplace and cutting operations to identify potential hazards and implement additional control measures as needed to maintain a safe work environment.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti[illegible]ions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im[illegible]of cont[illegible]measures.	☐	☐	
Permit requirements specified, such as Hot Wor[illegible]Electrical Work, W[illegible]t Heights etc.	☐	☐	
SWMS identifies plant and equipment to be u[illegible].	☐	☐	
Details of inspection checks required for any equipment listed a[illegible]noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training[illegible]skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
