Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:

Signature:

Title:

Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS, as well as reviews and modifications of the SWMS.

Full Name:

Title:

Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED

NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS

Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, then to communicate those hazards and then to further take steps to either eliminate or control each hazard.

If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.

Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.

The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).										
<p>Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.</p> <p>When a SWMS has been revised, the person conducting a business or undertaking must ensure all:</p> <ol style="list-style-type: none"> persons involved in the work are advised that a revision has been made and how they can access the revised SWMS; persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and, workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS. 										

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Trip and fall, Electrical shock	2M	<ul style="list-style-type: none"> - Ensure that the work area is properly organised and well-lit, with all cords, tools, and objects safely arranged to minimise the risk of trips and falls. - Keep the area surrounding the router clean and free from debris, sawdust, or other obstructions to avoid slipping and tripping hazards. - Inspect cables and power connections for any signs of fraying, damage, or wear before each use, and replace faulty cords accordingly to prevent electrical shock. - Utilise cable protectors or cable organizers to safely manage cables and reduce the chance of unintentional contact with electrical cords. - Properly ground all electrical equipment, including the router and any extension cords, to lessen the risk of electrical shock. - Implement a regular maintenance schedule to inspect, repair, and replace any worn or compromised components of the router to minimise potential hazards. - Provide workers with appropriate personal protective equipment (PPE) such as non-slip footwear, safety glasses, and hearing protection, and ensure all PPE is maintained in good working condition. - Train workers on the proper usage of the router and its associated equipment, emphasising safety measures and precautions to be taken during operation. - Establish clear communication lines among team members to notify others of potential hazards or changes in the work environment, and maintain updated signage and labels as necessary. - Develop and maintain an emergency response plan to address accidents or incidents related to trips, falls, or electrical shocks, ensuring workers know their roles and responsibilities in case of an emergency. 	1L	
2. Equipment inspection	Faulty equipment, Improper usage	3H	<ul style="list-style-type: none"> - Conduct a thorough visual inspection of the equipment before commencement of work to ensure there are no visible signs of wear, damage, or malfunction. - Perform regular preventative maintenance checks and servicing as per the manufacturer's guidelines to ensure the router is in optimal working condition. - Keep an updated logbook of all equipment inspections, maintenance, and repairs for easy tracking and future reference. - Ensure that all workers who handle or operate the router receive adequate training on proper usage, safety precautions, and handling procedures. - Implement and follow a standardised procedure for equipment inspection, including start-up and shut-down processes, to mitigate the risk of improper usage. - Verify that all safety guards, emergency stop buttons, and other protective features are in place and functioning as intended to prevent accidents and injuries during operation. 	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> - Encourage workers to report any issues or concerns with equipment immediately so that it can be addressed promptly and prevent possible incidents. - Continuously monitor the equipment during operation to identify any changes in performance, vibrations, or noises which may indicate potential issues. - Strictly enforce the use of personal protective equipment (PPE) such as safety goggles, earplugs, and dust masks for all workers operating or working near the router. - Keep the workspace clean, organised, and free from clutter to reduce the risk of slips, trips, and falls around the equipment. - Display clear warning and instructional signage near the router to remind workers of proper handling techniques and safety precautions. - Establish an incident reporting system to document any equipment-related accidents or near misses for further analysis and improvement of safety measures. - Regularly review and update the SWMS, equipment inspection processes, and training materials to ensure they stay current with industry best practices, technological advancements, and regulatory requirements. 		
3. Power connection	Electrical fire, Shock	3H	<ul style="list-style-type: none"> - Ensure all electrical equipment, including the router, is regularly inspected and tested by a qualified electrician in compliance with AS/NZS 3760 standard. - Verify that all power cables and electrical connections are free from visible damage, such as frayed or exposed wires, before connecting the router to a power source. - Utilise a Residual Current Device (RCD) when connecting the router to an electrical outlet to automatically shut off power in the event of ground-fault disturbances or unintended electrical contact. - Confirm that the voltage and frequency requirements specified on the router's nameplate are a match for those provided by the local electrical supply. - Implement a Lockout/Tagout (LOTO) system to restrict authorization and access to the router's power switches, preventing accidental energization during maintenance or inspection procedures. - Make certain the router and any supporting machinery are properly grounded, following the manufacturer's recommendations and local electrical standards. - Maintain a clear and unobstructed workspace around the router to minimise the risk of trip hazards caused by power cables or extension cords. - Establish sufficient overhead clearance for the routing of cables, avoiding loops or coils that could create heat and increase the risk of fire or other electrical issues. - Store all flammable materials away from the workspace, minimising the risk of ignition in the event of an electrical fire. 	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> - Train employees on the proper use, storage, and inspection of electrical equipment, effectively instructing them on emergency procedures and first-aid responses related to electrical shock incidents. - Display appropriate warning signs near the router and throughout the workspace, alerting employees and visitors to the potential risks associated with electricity. - Encourage open communication between management and staff members regarding perceived hazards or concerns related to the router and electrical safety. - Maintain a routine preventative maintenance schedule for the router, addressing any necessary repairs or component replacements promptly to ensure the highest possible level of electrical safety. 		
4. Set-up workspace	Poor ergonomics, Congested area	2M	[REDACTED]	1L

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are needed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	<input type="checkbox"/>	<input type="checkbox"/>	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Name, signature, position and date signed of the person approving the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Specific personnel and qualifications, experience is noted in the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Provides a step-by-step process of tasks required to carry out the activity or task.	<input type="checkbox"/>	<input type="checkbox"/>	
Adequate risk assessment of any identified hazards has been completed.	<input type="checkbox"/>	<input type="checkbox"/>	
Foreseeable hazards are identified and documented for each step.	<input type="checkbox"/>	<input type="checkbox"/>	
Any hazards listed in any site risk assessments have been added to the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	<input type="checkbox"/>	<input type="checkbox"/>	
Check control measures added to the SWMS are the most effective solutions.	<input type="checkbox"/>	<input type="checkbox"/>	
Responsible person is assigned and listed on the SWMS for the implementation of control measures.	<input type="checkbox"/>	<input type="checkbox"/>	
Permit requirements specified, such as Hot Work, Electrical Work, Work at Heights etc.	<input type="checkbox"/>	<input type="checkbox"/>	
SWMS identifies plant and equipment to be used.	<input type="checkbox"/>	<input type="checkbox"/>	
Details of inspection checks required for any equipment listed are noted on the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Describes any mandatory qualifications, experience, training, skills required to perform the work.	<input type="checkbox"/>	<input type="checkbox"/>	
Applicable personal protective equipment is selected on the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Lists any required permits or licenses.	<input type="checkbox"/>	<input type="checkbox"/>	
Reflects and documents any legislative references and/or Australian Standards.	<input type="checkbox"/>	<input type="checkbox"/>	
Identifies any hazardous substances used with specific control measures in line with any SDS.	<input type="checkbox"/>	<input type="checkbox"/>
