

Strut Spring Compress	sor SAFE WORK METHOD	STATEMENT (SWMS)								
TASK OR ACTIVITY: Strut Spring Compressor										
Business Name: [Company Name]		ABN: [ABN]	SWMS#							
Business Address: [Company Address]										
Contact Person:	Phone: [Phone]	E fil:								
THIS SAFE WORK METHOD	STATEMENT IS APPROVED BY	THE PLAN OF THE PROJECT								
Under the Work Health and Safety Regulation (WHS Regulation), a person conduct the proposed work starts.	eting a business or undertaking (N 3U) is	required to ture at a safe work method s	tatement (SWMS) is prepared before							
Full Name:										
Signature:		Title:	Date:							
Details of the person(s) responsible for ensuring implementation, monitoring and continuous	ompliance f the SWMS well as review	s and modifications of the SWMS.								
Full Name:		Title:	Phone:							
ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS VMS. ST HAVE THE FOLLOWING COMMUNICATED	N. 1E AND DATED SIGNATURE OF A CO. MUNICATED TO IN THE DEVELO	LL RELEVANT PERSONNEL WHO HAVE BI PMENT AND APPROVAL OF THIS SWMS	EEN CONSULTED AND							
Safety meetings or toolbox talks will be sched ed in accordance with egislative requirements to first identify any site hazards, conditions those hazards and then to further take steps to either the conditions of the conditions are or conditional talks.	NAME	SIGNATURE	DATE							
If an incident or a near miss occurs, all work must standardly. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.										
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.										
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

- 1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
- 2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS: and.
- 3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Improper equipment, lack of training	2M	- Ensure all employees handling the strut spring compressor have completed relevant training and hold valid certifications. - Conduct a thorough equipment inspection before commencing work to ensure that all parts of the strut spring compressor are good working condition and free from defects. - Make sure the instructions manual for the struting compressor is available on site for reference during equipment setup and optiation. - Provide appropriate personal attective equipment RPF of workers, including safety gloves, eye protein, an anoteel-toed boots, a conforce usage. - Implement a fordy system where a perience to apployees are paired with less-experienced releagues to a sure protein or proteince and assistance throughout the task. - Holdon lob bride with all workers involved to discuss the specific details of the task, protein laboration with all workers involved to discuss the specific details of the task, protein laboration with all workers involved to discuss the specific details of the task, protein laboration with all workers involved to discuss the specific details of the task, protein laboration with all workers involved to discuss the specific details of the task, protein laboration and required control measures. - Design to a impets a supervisor to oversee the strut spring compressor poperation to be used on protein supervisor to oversee the strut spring compressor for safe movement during equipment handling. - In element an equipment tagging system so that only inspected and approved strut spring compressors are used on site. - Determine the correct size and type of strut spring compressor necessary for the specific vehicle being serviced, ensuring that the selected equipment is compatible and can handle the load properly. - Keep an accessible first aid kit nearby in case of any injuries sustained during the preparation and execution of the task. - Review emergency procedures and evacuation routes as part of the preparation process, ensuring all workers are aware of what to do in case o	1L	
2. Inspection	Damaged equipment, poor lighting	3H	- Regular maintenance and inspection: Ensure that all equipment, including the strut spring compressor, is regularly inspected for any signs of damage or malfunction before use.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			 Repair or replace damaged equipment: If any equipment is found to be damaged during the inspection process, it should be immediately repaired or replaced in order to minimise the risk of accidents or injuries. 		
			- Adequate lighting: Make sure that the work are as well-lit to enable workers to clearly see their surroundings and identify cantial hazards more easily.		
			 Clear workspace: To prevent any accidents a used to apping or falling, the immediate work area should be kept clear of a consecessary items, debris, or obstacles. Use of proper personal protein the equipment (PPL Works should wear appropriate safety or much as a fety goggles, glove and steel-toed boots to 		
			 protect themselve from pointial crards. Training an certification: inployee using a strut spring compressor must be sufficiently trained and content in its second correct operation to avoid mishandling and a central content. 		
			- Correction ge of the ipment: Employees must follow manufacturer guidelines and instructions then open ting the strut spring compressor, ensuring proper setup and handling to all 1 any local ardous situations.		
	•		ddy's stem: ve a designated coworker present while using the strut spring com, ss , who can provide assistance, observe for any hazards, and render aid in ase or a regencies.		
			- nergency response plan: Establish and communicate an emergency response plan with employees for prompt action in case of accidents or injuries, including naving first aid kits and emergency contact details readily available.		
			- Proper tool storage: Store the strut spring compressor and other equipment securely when not in use to minimise the risk of accidental damage or injuries due to improperly stored tools.		
			- Ongoing hazard assessment: Continuously assess the work environment for hazards, incorporating new control measures as needed and reinforcing safety protocols with workers on a regular basis.		
			- Ensure the work area is clean and free from debris, clutter or any objects that could pose a tripping hazard.		
3. Setup	Incorrect work area setup, tripping hazards	3H	- Place appropriate signage, such as "Caution - Work Area" or "Watch Your Step," to alert workers and pedestrians of potential hazards in the immediate vicinity.	2M	
			- Store all tools, equipment, and materials not in use in designated storage areas to minimise any tripping risks.		
			- Verify that the strut spring compressor is properly assembled and securely fastened to the floor or workbench, following the manufacturer's recommendations.		

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Organise the work area in a logical and ergonomic manner, allowing enough space for workers to move around safely without the risk of bumping into equipment or compressors.		
			- Provide adequate lighting in the work area to sure visibility and safe navigation around any potential hazards.		
			- Inspect all equipment, like the strut spring of press for signs of wear, damage, or faulty operation before each use. If any issumound, remove the tool from service until it can be repaired or replaced.		
			- Consider using non-slip rubb, mats or other anti- area to increase safe and else and educe the likelihood slips, trips, and falls.		
			- Properly train ployees how set up the ork environment and operate the strut spring to pressor sa dentification of other education and material.		
			- Reg : review update the Safe Work Method Statement (SWMS) to ensure that co tro neasure remain effective and adequately address any changes in the work at a, a sipment or processes.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

	SAF WO A STHED STATEMENT MONITORING AND REVIEW							
The SWMS must be reviewed regularly to refixe sure it remains effective and must be reviewed (and revised if necessary) if relevant control measure are 1000 per review process should be carried out in consultation with workers (including contractors and subcontract is) who may be affected by the operation of the SWMS and their health and safety representatives who refine esented that work group at the workplace. When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.				The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to: 1. Spot Checks. 2. Consultation with workers, contractors and sub-contractors. 3. Internal audits on a continual basis. An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.			
Names and signatures of all relevant personnel consulted during the development of the SWMS.		P P	
Name, signature, position and date signed of the person approving the SWMS.			
Specific personnel and qualifications, experience is noted in the SWMS.	P		
Provides a step-by-step process of tasks required to carry out the activity or task.			
Adequate risk assessment of any identified hazards has been completed.			
Foreseeable hazards are identified and documented for each step.			
Any hazards listed in any site risk assessments have been added to the SWh			
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.			
Check control measures added to the SWMS are the most effecting so tions.			
Responsible person is assigned and listed on the SWMS for the imperent of continue assures.			
Permit requirements specified, such as Hot Work, Veralt Heights etc.			
SWMS identifies plant and equipment to be u d.			
Details of inspection checks required for any equipment listed are noted on the SWMS.			
Describes any mandatory qualifications, experience raining skills required to perform the work.			
Applicable personal protective equipment is selected on the SWMS.			
Lists any required permits or licenses.			
Reflects and documents any legislative references and/or Australian Standards.			
dentifies any hazardous substances used with specific control measures in line with any SDS.
