

**Surface Oxidising Treatment | SAFE WORK METHOD STATEMENT (SWMS)**

**TASK OR ACTIVITY: Surface Oxidising Treatment**

Business Name: [Company Name]		ABN: [ABN]	SWMS#
Business Address: [Company Address]			
Contact Person:	Phone: [Phone]	Email:	

**THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PERSON CONDUCTING BUSINESS OF THE PROJECT**

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:

Signature: \_\_\_\_\_ Title: \_\_\_\_\_ Date: \_\_\_\_\_

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS, as well as reviews and modifications of the SWMS.

Full Name: \_\_\_\_\_ Title: \_\_\_\_\_ Phone: \_\_\_\_\_

**ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED** | **NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS**

	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, then to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

**CLIENT OR PRINCIPAL CONTRACTOR DETAILS**

Client:	SCOPE OF WORKS Provide a detailed description of the specific work being carried out (otherwise known as scope of works).
Project Name:	
Project Address:	
Project Manager:	
Contact Phone:	
Project Manager Signature:	
Date SWMS supplied to Project Manager:	

**ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT**

<input type="checkbox"/> involves a risk of a person falling more than 2 meters.	<input type="checkbox"/> is carried out on or near pressurised gas mains or piping.
<input type="checkbox"/> is carried out on a telecommunication tower.	<input type="checkbox"/> is carried out on or near chemical, fuel or refrigerant lines.
<input type="checkbox"/> involves demolition of an element of a structure that is load-bearing.	<input type="checkbox"/> is carried out on or near energised electrical installations or services.
<input type="checkbox"/> involves demolition of an element related to the physical integrity of a structure.	<input type="checkbox"/> is carried out in an area that may have a contaminated or flammable atmosphere.
<input type="checkbox"/> involves, or is likely to involve, disturbing asbestos.	<input type="checkbox"/> involves tilt-up or precast concrete.
<input type="checkbox"/> involves structural alteration or repair that requires temporary supports to prevent collapse.	<input type="checkbox"/> is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
<input type="checkbox"/> is carried out in or near a confined space.	<input type="checkbox"/> is carried out in an area of a workplace where there is any movement of powered mobile plant.
<input type="checkbox"/> is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	<input type="checkbox"/> is carried out in areas with artificial extremes of temperature.
<input type="checkbox"/> is carried out in or near water or other liquid that involves a risk of drowning.	<input type="checkbox"/> involves diving work.

**ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY**

<input type="checkbox"/> Forklift	<input type="checkbox"/> Crane/s	<input type="checkbox"/> Hoist/s	<input type="checkbox"/> Excavator	<input type="checkbox"/> Backhoe/Loader	<input type="checkbox"/> Boom Lift	<input type="checkbox"/> EWP	<input type="checkbox"/> Genie Lift
<input type="checkbox"/> Trencher	<input type="checkbox"/> Drilling Rig	<input type="checkbox"/> Trucks	<input type="checkbox"/> Formwork	<input type="checkbox"/> Bobcat	<input type="checkbox"/> Flammable Gas	<input type="checkbox"/> Fuel	<input type="checkbox"/> Dozer
<input type="checkbox"/> High Voltage	<input type="checkbox"/> Mulcher	<input type="checkbox"/> Tilt-up Panels	<input type="checkbox"/> Roller	<input type="checkbox"/> Scissor Lift	<input type="checkbox"/> Tractor	<input type="checkbox"/> Other -	

**RISK MATRIX**

LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION	HEIRARCHY OF CONTROLS
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE			<b>Elimination</b> Remove the hazard.
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEED	<b>Substitution</b> Replace the hazard.
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review before work starts.	<b>Isolation</b> Isolate People from the hazard
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.	<b>Engineering</b> Isolate the hazard.
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	Monitor and keep records	<b>Administrative</b> Change the work. <b>PPE</b>

**Notes on Hierarchy of Controls:** Elimination methods are the most effective and preferred when controlling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the third most effective, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Equipment) is the least effective method.

**PERSONAL PROTECTIVE EQUIPMENT (PPE)**

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	EYE/FACE PROTECTION	RESPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

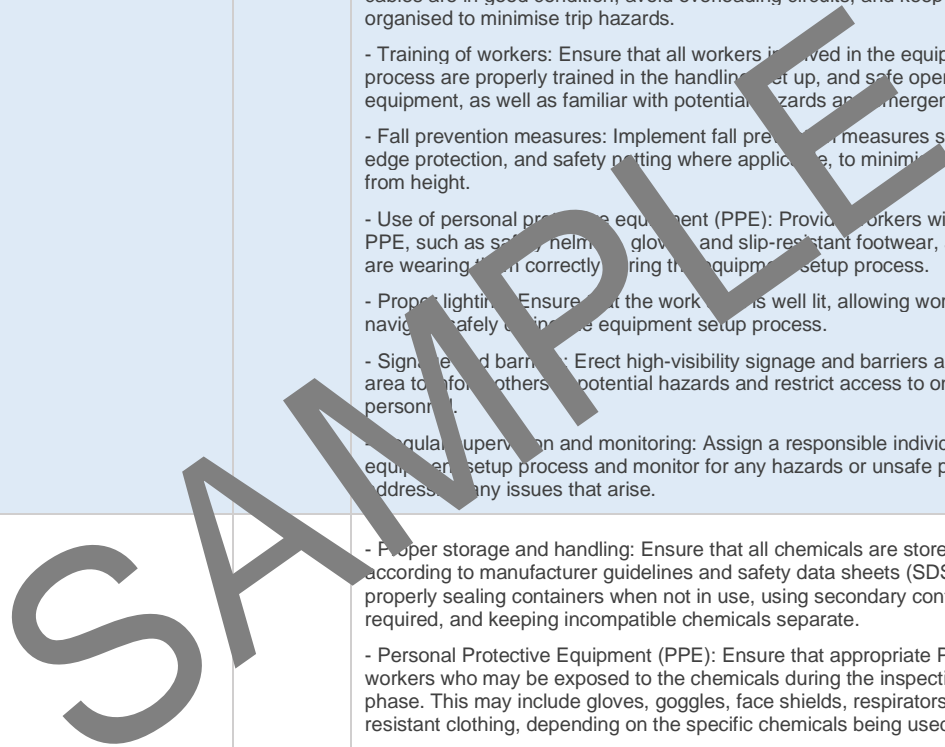

**Note:** A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Trip hazards, Inadequate lighting	2M	<ul style="list-style-type: none"> <li>- Conduct a thorough inspection of the work area to identify and remove potential trip hazards, such as loose cables, equipment, and debris.</li> <li>- Ensure that all workers are properly trained in recognizing and addressing potential trip hazards during the preparation phase of surface oxidizing treatment.</li> <li>- Place warning signs or barriers around identified trip hazards that cannot be immediately removed, to alert workers of their presence and prevent accidents.</li> <li>- Provide adequate lighting in the work area, including portable task lighting if necessary, to ensure visibility for workers and minimize the risk of trips and falls due to poor lighting conditions.</li> <li>- Regularly inspect and maintain all equipment used for surface oxidizing treatment, including ladders, scaffolding, and machinery, to guarantee that they are in good working order and do not pose additional safety risks.</li> <li>- Implement a tidy workplace policy, encouraging workers to keep their work areas clear of unnecessary materials, tools, and equipment that could create trip hazards.</li> <li>- Require workers to wear appropriate footwear with non-slip soles to reduce the risk of slips, trips, and falls while performing surface oxidizing treatment tasks.</li> <li>- Clearly mark designated walkways and access paths throughout the worksite, ensuring that these routes remain clear of obstructions to minimise the risk of trips and falls for staff.</li> <li>- Establish an effective communication system among team members to report any new trip hazards or changes in work conditions, allowing for swift action to mitigate risks.</li> <li>- Schedule regular toolbox talks or safety briefings to reinforce the importance of good housekeeping practices and hazard identification, reminding workers of their shared responsibility in maintaining a safe work environment during surface oxidizing treatment projects.</li> </ul>	1L	
2. Equipment Setup	Electric shock, Falls from height	2M	<ul style="list-style-type: none"> <li>- Regular inspection and maintenance of electrical equipment: Ensure that all electrical equipment and tools involved in the equipment setup are inspected for any wear or damage before use, and are maintained according to the manufacturer's guidelines.</li> <li>- Use of residual current devices (RCDs): Incorporate RCDs into the electrical circuitry during equipment setup to provide protection against electric shocks by immediately cutting off power supply in case of a detected fault.</li> <li>- Correct selection of equipment: Choose the appropriate type and size of equipment for the task, ensuring it meets the necessary safety standards and is suitable for the work environment conditions.</li> <li>- Secure installation of equipment: Install equipment properly and securely to minimise risks of falling, shifting, or collapsing during use. Follow manufacturer instructions and adhere to relevant safety codes and regulations.</li> </ul>	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> <li>- Safe use of extension cords and cables: Make sure that extension cords and cables are in good condition, avoid overloading circuits, and keep cords well-organised to minimise trip hazards.</li> <li>- Training of workers: Ensure that all workers involved in the equipment setup process are properly trained in the handling, set up, and safe operation of the equipment, as well as familiar with potential hazards and emergency procedures.</li> <li>- Fall prevention measures: Implement fall prevention measures such as guardrails, edge protection, and safety netting where applicable, to minimise the risk of falls from height.</li> <li>- Use of personal protective equipment (PPE): Provide workers with appropriate PPE, such as safety helmets, gloves, and slip-resistant footwear, and ensure they are wearing them correctly during the equipment setup process.</li> <li>- Proper lighting: Ensure that the work area is well lit, allowing workers to see and navigate safely during the equipment setup process.</li> <li>- Signage and barriers: Erect high-visibility signage and barriers around the work area to inform others of potential hazards and restrict access to only authorised personnel.</li> <li>- Regular supervision and monitoring: Assign a responsible individual to oversee the equipment setup process and monitor for any hazards or unsafe practices, promptly addressing any issues that arise.</li> </ul>		
3. Inspection and Testing	Exposure to chemicals, Slippery surfaces	2M	<ul style="list-style-type: none"> <li>- Proper storage and handling: Ensure that all chemicals are stored and handled according to manufacturer guidelines and safety data sheets (SDS). This includes properly sealing containers when not in use, using secondary containment where required, and keeping incompatible chemicals separate.</li> <li>- Personal Protective Equipment (PPE): Ensure that appropriate PPE is worn by all workers who may be exposed to the chemicals during the inspection and testing phase. This may include gloves, goggles, face shields, respirators, and chemical-resistant clothing, depending on the specific chemicals being used.</li> <li>- Ventilation: Implement sufficient ventilation measures in the work area, such as fume hoods or exhaust fans, to minimise worker exposure to potentially hazardous chemical fumes during the inspection and testing process.</li> <li>- Spill response plan: Create a detailed spill response plan for the work area to ensure that any accidental spills or leaks are addressed promptly, limiting the potential harm to both workers and the environment.</li> <li>- Hazard communication: Clearly label all containers of chemicals with their contents and hazards. Provide access to SDS for all chemicals in use, and ensure that workers have received adequate training to handle these materials safely.</li> <li>- Slip-resistant flooring: Install slip-resistant flooring in work areas prone to spills or wet surfaces, helping to reduce the risk of slips and falls during inspection and testing.</li> </ul>	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> <li>- Housekeeping: Regularly clean and maintain work areas to prevent buildup of dirt, dust, or debris that could create slippery surfaces or add to the hazard potential of chemicals in use.</li> <li>- Inspection and maintenance of equipment: Conduct regular inspections and maintenance of equipment used in the oxidizing treatment process, including testing instruments, tanks, and other apparatus, to ensure they are functioning correctly and reduce the risk of malfunctions leading to hazardous situations.</li> <li>- Employee training: Provide comprehensive training to all employees working with the oxidizing treatment process, focusing on the hazards associated with this process, safe handling techniques for chemicals, and emergency response procedures.</li> <li>- Segregation of incompatible chemicals: Ensure that incompatible chemicals are stored separately in designated areas to prevent accidental mixing and subsequent reactions which could lead to hazardous situations.</li> <li>- Emergency eyewash stations and showers: Install and maintain emergency eyewash stations and showers close to the work area for immediate use in case of chemical exposure. Conduct regular inspections to ensure they remain functional at all times.</li> <li>- Monitoring employee exposure: Implement ongoing monitoring of worker exposure to chemicals during inspection and testing activities, ensuring it remains below acceptable limits. Take corrective action if needed to further reduce hazards or modify work practices as necessary.</li> </ul>

**SIGNATORIES OF THE SAFE WORK METHOD STATEMENT**

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

**SAFE WORK METHOD STATEMENT MONITORING AND REVIEW**

**The SWMS must be reviewed regularly** to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are needed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

**The SWMS must be monitored regularly** for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

**SAFE WORK METHOD STATEMENT REVIEW CHECKLIST**

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	<input type="checkbox"/>	<input type="checkbox"/>	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Name, signature, position and date signed of the person approving the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Specific personnel and qualifications, experience is noted in the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Provides a step-by-step process of tasks required to carry out the activity or task.	<input type="checkbox"/>	<input type="checkbox"/>	
Adequate risk assessment of any identified hazards has been completed.	<input type="checkbox"/>	<input type="checkbox"/>	
Foreseeable hazards are identified and documented for each step.	<input type="checkbox"/>	<input type="checkbox"/>
