

Suspended Truss Clamp | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Suspended Truss Clamp

Business Name: [Company Name]

ABN: [ABN]

SWMS#

Business Address: [Company Address]

Contact Person:

Phone: [Phone]

Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:

Signature:

Title:

Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS, as well as reviews and modifications of the SWMS.

Full Name:

Title:

Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED

NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS

Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, then communicate those hazards and then to further take steps to either eliminate or control each hazard.

If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.

Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.

The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

RISK MATRIX										
LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION	HEIRARCHY OF CONTROLS		
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE			Elimination Remove the hazard.		
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEED	Substitution Replace the hazard.		
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review before work starts.	Isolation Isolate People from the hazard		
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.	Engineering Isolate the hazard.		
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	Monitor and keep records	Administrative Change the work.		
Notes on Hierarchy of Controls: Elimination methods are the most effective and preferred when controlling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the third most effective, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Equipment) is the least effective method.										
PERSONAL PROTECTIVE EQUIPMENT (PPE)										
FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	RESPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
										
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).										
<p>Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.</p> <p>When a SWMS has been revised, the person conducting a business or undertaking must ensure all:</p> <ol style="list-style-type: none"> persons involved in the work are advised that a revision has been made and how they can access the revised SWMS; persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and, workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS. 										

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Falls from height, falling objects	3H	<ul style="list-style-type: none"> - Provide adequate training: Ensure all workers involved in the operation have received proper training in the installation, handling, and dismantling of suspended truss clamps. - Implement fall protection system: Install guardrails or other suitable fall prevention systems around the work area to minimise the risk of falls from height. - Utilise personal protective equipment (PPE): Require workers to wear appropriate PPE, including safety harnesses, hard hats, and non-slip footwear. - Inspect equipment before use: Regularly inspect all equipment, including clamps, ropes, and hoists, to ensure they are undamaged and in good working condition. - Secure work area: Barricade or cordon off the work area to prevent unauthorised personnel from entering the potential hazards zone. - Plan for unstable weather conditions: Monitor weather forecasts and suspend operations if adverse weather conditions, such as high winds or storms, pose a risk to worker safety. - Maintain clear communication: Establish effective communication methods among team members, such as two-way radios, to ensure everyone is aware of any potential hazards during operations. - Use correct lifting techniques: Train workers on proper lifting techniques to help prevent injuries from handling heavy or awkward loads. - Follow manufacturer guidelines: Adhere strictly to manufacturer guidelines for suspended truss clamp installation, maintenance, and usage. - Establish an emergency plan: Develop an emergency response plan, including rescue procedures, to deal with potential incidents that could occur during the work process. - Implement regular safety inspections: Conduct periodic safety audits and inspections to identify and rectify any potential issues in the working environment. - Limit work at height exposure: Minimise the amount of time workers spend at height by streamlining processes and effectively organising tasks. - Use appropriate hoisting equipment: Only use certified hoisting equipment compatible with the suspended truss clamp system to reduce the risk of falling objects. - Schedule regular breaks: Provide workers with scheduled rest periods to prevent fatigue that could lead to accidents or errors. 	2M	
2. Site Inspection	Trips and slips, uneven surfaces	2M	<ul style="list-style-type: none"> - Prior to the commencement of any work, conduct a thorough site inspection to identify possible hazards such as uneven surfaces, slippery materials, and obstructions. - Keep the work area clean and organised by tidying up any debris or materials that could potentially cause trips and slips. 	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> - Clearly mark hazardous areas, such as uneven surfaces and slippery spots, using warning signs, cones, or safety tape to create a visible barrier. - Implement appropriate housekeeping measures, including regular sweeping and mopping, to remove dirt, dust, and spills that could make surfaces slippery. - Ensure suitable personal protective equipment (PPE) is worn by all personnel, including slip-resistant footwear with good traction and grip to minimise the risk of slipping on wet, uneven, or otherwise unsafe surfaces. - Install temporary flooring or leveling materials on uneven surfaces where needed, to provide a safer walking and working surface for everyone. - Provide adequate lighting at the worksite so that workers have clear visibility of their surroundings, reducing the likelihood of tripping or slipping hazards. - Train all workers on proper lifting techniques when handling heavy loads to prevent injuries from trips and falls. Encourage the use of mechanical aids like trolleys and wheelbarrows to transport materials. - Regularly monitor weather conditions to ensure that the work area remains safe during inclement weather. In the event of rain, pay extra attention to potential slips and trips hazards while adapting control measures accordingly. - Create and enforce a 'walk, don't run' policy at the worksite, advising all workers to move cautiously and mindfully to avoid sudden movements that may increase the risk of trips and slips. 		
3. Equipment Assembly	Finger pinch, manual handling injuries	2M	<ul style="list-style-type: none"> - Proper training and instruction: Ensure all workers involved in the equipment assembly process are provided with adequate training and instructions on how to handle the clamps correctly, as well as the proper techniques for lifting and moving heavy objects. - Task planning: Prioritise setting up a thorough plan for the assembly process, identifying the safest methods for carrying out the necessary tasks, and ensuring all team members are aware of their roles and responsibilities throughout the procedure. - Personal Protective Equipment (PPE): Provide workers with appropriate PPE, such as safety gloves, to minimise the risk of finger pinching injuries during the assembly process. - Appropriate tools: Use adjustable wrenches or other proper tools that can tightly grip the clamps to prevent slippage and pinch hazards. - Inspection of equipment: Before commencing work, check the clamps and other equipment for any visible defects or damages that could compromise safety during the assembly process. - Two-person lifting technique: Encourage workers to use a "buddy system" when manually handling heavy components of the truss clamp, to distribute the weight evenly and reduce the risk of injury. 	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> - Maintain clean and organised work area: Regularly clear the assembly area of debris, obstructions, and excess materials to prevent trips, slips, and falls and ensure ease of movement while working. - Properly store unused materials: Store unused truss clamp components in designated areas when not being used, to prevent them from becoming potential trip hazards or causing other injuries. - Communication and signaling: Establish clear communication methods such as hand signals to minimise confusion between workers during the assembly process, helping to avoid incidents that might lead to injury. - Implement regular breaks: Organise short breaks for workers throughout the day to help prevent fatigue-related injuries, particularly when performing physically demanding tasks such as handling heavy equipment. - Continuous monitoring and evaluation: Keep a close eye on the work process and be prepared to adjust or modify plans as needed, in order to maintain the highest possible level of safety. Encourage workers to report any concerns or risk factors they come across, so that adjustments can be made to prevent injuries from occurring.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are needed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	<input type="checkbox"/>	<input type="checkbox"/>	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Name, signature, position and date signed of the person approving the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Specific personnel and qualifications, experience is noted in the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Provides a step-by-step process of tasks required to carry out the activity or task.	<input type="checkbox"/>	<input type="checkbox"/>	
Adequate risk assessment of any identified hazards has been completed.	<input type="checkbox"/>	<input type="checkbox"/>	
Foreseeable hazards are identified and documented for each step.	<input type="checkbox"/>	<input type="checkbox"/>	
Any hazards listed in any site risk assessments have been added to the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	<input type="checkbox"/>	<input type="checkbox"/>	
Check control measures added to the SWMS are the most effective solutions.	<input type="checkbox"/>	<input type="checkbox"/>	
Responsible person is assigned and listed on the SWMS for the implementation of control measures.	<input type="checkbox"/>	<input type="checkbox"/>	
Permit requirements specified, such as Hot Work, Electrical Work, Work at Heights etc.	<input type="checkbox"/>	<input type="checkbox"/>	
SWMS identifies plant and equipment to be used.	<input type="checkbox"/>	<input type="checkbox"/>	
Details of inspection checks required for any equipment listed are noted on the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Describes any mandatory qualifications, experience, training, skills required to perform the work.	<input type="checkbox"/>	<input type="checkbox"/>	
Applicable personal protective equipment is selected on the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Lists any required permits or licenses.	<input type="checkbox"/>	<input type="checkbox"/>	
Reflects and documents any legislative references and/or Australian Standards.	<input type="checkbox"/>	<input type="checkbox"/>	
Identifies any hazardous substances used with specific control measures in line with any SDS.	<input type="checkbox"/>	<input type="checkbox"/>
